Cliff, Helen W. Kreuzer, Christopher J. Ehrhardt, David S.

Wunschel, 2011-12-09 Combining the disciplines of biological physical and chemical science microbial forensics has a rapidly rising profile in a world increasingly troubled by the threat of biocrime and bioterrorism This valuable resource is a major addition to a body of literature reckoned to lack sufficient breadth It presents a variety of phenotypic and trace signature methodologies associated with cultured microorganisms that despite being genetically identical may be characterized by differing cultural environments One of the central challenges faced by those working in this field is the sheer diversity of potentially harmful agents which in themselves total more than 1000 viruses bacteria fungi and protozoan parasites Their numerous additional variants render the process of fingerprinting biological agents notoriously difficult especially when the limitations of genetic analysis are factored in Attribution of crime is relatively easy through human DNA but lacking the genetic individuation of humans and animals microbial forensics has to complement phylogenetic techniques with chemical

and physical ones In the best case genetic analysis in the biocrime sector can exclude sources narrow the population of possible sources and support associations with potential sources To complement these genetic techniques chemical and physical methods can be used to compare signatures imparted to microbial samples by environments in which they are grown and processed Collating a range of microbiological fingerprinting techniques in one volume and covering everything from statistical analysis to laboratory protocols this publication furthers the aim of forensic investigators who need robust and legally admissible forensic evidence to present in a courtroom

Neuropsychiatric Manifestations in Neurological Diseases Jong S.

Kim,2024-04-22 Psychiatric symptoms or mood emotional disturbances are diverse in patients with neurological diseases that include depression anxiety emotional incontinence anger fatigue and apathy These symptoms are common more than 1/3 of the patients suffer from these symptoms Unfortunately they have been neglected because 1 unlike other neurological symptoms such as motor dysfunction speech disturbances or visual field defect these symptoms are not visible and difficult to be noticed unless they are specifically examined by a physician who is properly educated on this problem 2 they are often not regarded as neurological symptoms either by the patients or their caregivers 3 they are relatively poorly studied by both neurologists and psychiatrists and accordingly are unfamiliar to the physicians Especially although depression is well known to physicians other symptoms such as emotional incontinence anger fatigue or apathy are not appropriately assessed by

physicians and frequently misdiagnosed as depression Moreover there are difficulties in diagnosing depression in patients neurological diseases For example the individual items included in depression diagnosis such as sleep disturbances appetite loss or fatigue can result from neurological diseases or comorbid physical conditions in patients with neurological diseases Therefore a diagnosis of depression should be made cautiously Finally it should be understood that the importance of different mood emotional syndromes differ among various neurological diseases for instance although emotional incontinence and anger occur in as many as 20 30 % of stroke patients apathy and fatigue are more important symptoms than these for patients with neuro degenerative disease In clinical practice recognizing these symptoms is important because they negatively affect the patients quality of life impair the functional recovery increase the mortality and increase the caregiver burden Nevertheless unlike other neurological symptoms such as motor sensory dysfunction and speech disturbances they are relatively well managed mostly by pharmacological therapy such as selective serotonin re uptake inhibitors SSRI The phenomenology of these neuropsychiatric symptoms and related factors pathophysiological mechanism and treatment strategies should be properly educated for neurologists psychiatrists and other physicians The book is written by experts in this field to disseminate important knowledges to neurologists psychiatrists psychologists and other physicians and will eventually benefit patients with neurological diseases
