methodological and conceptual tools with special focus on formal methods for software engineering logics of programs and links to neighbouring disciplines Their scope comprises relation relation algebras and Kleene algebras related formalisms such as process algebras fixed point calculi idempotent semirings quantales allegories dynamic algebras cylindric algebras and their applications in areas such as verification analysis and development of programs and algorithms relational formal methods such as B or Z tabular methods algebraic approaches to logics of programs modal and dynamic logics interval and temporal logics algebraic semantics of programming languages graph theory and combinatorial optimization games automata and language theory mechanised and automated reasoning decision procedures spatio temporal reasoning knowledge acquisition preference and scaling methods or information systems **Boosted Statistical Relational Learners** Sriraam Natarajan,Kristian Kersting,Tushar Khot,Jude Shavlik,2015-03-03 This SpringerBrief addresses the challenges of analyzing multi relational and noisy data by proposing several Statistical Relational Learning SRL methods These methods combine the expressiveness of first order logic and the ability of probability theory to handle uncertainty It provides an overview of the methods and the key assumptions that allow for adaptation to different models and real world applications The models are highly attractive due to their compactness and comprehensibility but learning their structure is computationally intensive To combat this problem the authors review the use of functional gradients for boosting the structure and the parameters of statistical relational models The algorithms have been applied successfully in several SRL settings and have been adapted to several real problems from Information extraction in text to medical problems Including both context and well tested applications Boosting Statistical Relational Learning from Benchmarks to Data Driven Medicine is designed for researchers and professionals in machine learning and data mining Computer engineers or students interested in statistics data management or health informatics will also find this brief a valuable resource **New Frontiers in Mining Complex Patterns** Annalisa Appice,Michelangelo Ceci,Corrado Loglisci,Giuseppe Manco,Elio Masciari,Zbigniew Ras,2013-03-25 This book constitutes the thoroughly refereed conference proceedings of the First International Workshop on New Frontiers in Mining Complex Patterns NFMCP 2012 held in conjunction with ECML PKDD 2012 in Bristol UK in September 2012 The 15 revised full papers were carefully reviewed and selected from numerous submissions The papers are organized in topical sections on mining rich relational datasets mining complex patterns from miscellaneous data mining complex patterns from trajectory and sequence data and mining complex patterns from graphs and networks
Foundations of Rule Learning Johannes Fürnkranz,Dragan Gamberger,Nada Lavrač,2012-11-06 Rules the clearest most explored and best understood form of knowledge representation are particularly important for data mining as they offer the best tradeoff between human and machine understandability This book presents the fundamentals of rule learning as investigated in classical machine learning and modern data mining It introduces a feature based view as a unifying framework for propositional and relational rule learning thus bridging the gap between attribute value learning and inductive

logic programming and providing complete coverage of most important elements of rule learning The book can be used as a textbook for teaching machine learning as well as a comprehensive reference to research in the field of inductive rule learning As such it targets students researchers and developers of rule learning algorithms presenting the fundamental rule learning concepts in sufficient breadth and depth to enable the reader to understand develop and apply rule learning techniques to real world data **Inductive Logic Programming** Tamas Horváth,2003-09-24 This book constitutes the refereed proceedings of the 13th International Conference on Inductive Logic Programming ILP 2003 held in Szeged Hungary in September October 2003 The 23 revised full papers presented were carefully reviewed and selected from 53 submissions Among the topics addressed are multirelational data mining complexity issues theory revision clustering mathematical discovery relational reinforcement learning multirelational learning inductive inference description logics grammar systems and inductive learning **Semantic Data Mining** Agnieszka Lawrynowicz,2017-04-15 Ontologies are now increasingly used to integrate and organize data and knowledge particularly in data and knowledge intensive applications in both research and industry The book is devoted to semantic data mining a data mining approach where domain ontologies are used as background knowledge and where the new challenge is to mine knowledge encoded in domain ontologies and knowledge graphs rather than only purely empirical data The introductory chapters of the book provide theoretical foundations of both data mining and ontology representation Taking a unified perspective the book then covers several methods for semantic data mining addressing tasks such as pattern mining classification and similarity based approaches It attempts to provide state of the art answers to specific challenges and peculiarities of data mining with use of ontologies in particular How to deal with incompleteness of knowledge and the so called Open World Assumption What is a truly semantic similarity measure The book contains several chapters with examples of applications of semantic data mining The examples start from a scenario with moderate use of lightweight ontologies for knowledge graph enrichment and end with a full fledged scenario of an intelligent knowledge discovery assistant using complex domain ontologies for meta mining i e an ontology based meta learning approach to full data mining processes The book is intended for researchers in the fields of semantic technologies knowledge engineering data science and data mining and developers of knowledge based systems and applications **Inductive Logic Programming** Hendrik Blockeel,2008-03-14 This book constitutes the thoroughly refereed post conference proceedings of the 17th International Conference on Inductive Logic Programming ILP 2007 held in Corvallis OR USA in June 2007 in conjunction with ICML 2007 the International Conference on Machine Learning The 15 revised full papers and 11 revised short papers presented together with 2 invited lectures were carefully reviewed and selected from 38 initial submissions The papers present original results on all aspects of learning in logic as well as multi relational learning and data mining statistical relational learning graph and tree mining relational reinforcement learning and learning in other non propositional knowledge representation frameworks Thus all current topics in inductive logic

programming ranging from theoretical and methodological issues to advanced applications in various areas are covered

Languages, Methodologies and Development Tools for Multi-Agent Systems Mehdi Dastani,2008-07-18 This book constitutes the thoroughly refereed post workshop proceedings of the First International Workshop on Languages Methodologies and Development Tools for Multi Agent Systems LADS 2007 held in Durham UK in September 2007 The workshop was part of MALLOW 2007 a federation of workshops on Multi Agent Logics Languages and Organizations The 15 revised full papers presented together with 1 invited paper reporting the aims and achievements of the OpenKnowledge project were carefully reviewed and selected from 32 submissions The papers are organized in topical sections on agent reasoning and semantics declarative languages and technologies methodologies and design and development frameworks
