very fast indeed Big History courses are taught in the schools and universities of several dozen countries Hundreds of researchers are involved in studying and teaching Big History The unique approach of Big History the interdisciplinary genre of history that deals with the grand narrative of 13.8 billion years has opened up a vast amount of research agendas Big History brings together constantly updated information from the scientific disciplines and merges it with the contemplative realms of philosophy and the humanities It also provides a connection between the past present and future Big History is a colossal and extremely heterogeneous field of research encompassing all the forms of existence and all timescales Unsurprisingly Big History may be presented in very different aspects and facets In this volume the Big History is presented and discussed in three different ways In its first part Big History is explored in terms of methodology theories of knowledge as well as showcasing the personal approach of scholars to Big History The second section comprises such articles that could clarify Big History's main trends and laws The third part of this book explores the nature of teaching Big History as well as profiling a number of educational methods This volume will be useful both for those who study interdisciplinary macroproblems and for specialists working in focused directions as well as for those who are interested in evolutionary issues of Astrophysics Geology Biology History Anthropology Linguistics and other areas of study More than that this edition will challenge and excite your vision of your own life and the exciting new discoveries going on around us

Rethinking Human Evolution Jeffrey H. Schwartz, 2022-11-01 Contributors from a range of disciplines consider the disconnect between human evolutionary studies and the rest of evolutionary biology The study of human evolution often seems to rely on scenarios and received wisdom rather than theory and methodology with each new fossil or molecular analysis interpreted as supporting evidence for the presumed lineage of human ancestry We might wonder why we should pursue new inquiries if we already know the story Is paleoanthropology an evolutionary science Are analyses of human evolution biological In this volume contributors from disciplines that range from paleoanthropology to philosophy of science consider the disconnect between human evolutionary studies and the rest of evolutionary biology All of the contributors reflect on their own research and its disciplinary context considering how their fields of inquiry can move forward in new ways The goal is to encourage a more multifaceted intellectual environment for the understanding of human evolution Topics discussed include paleoanthropology's history of procedural idiosyncrasies the role of mind and society in our evolutionary past humans as large mammals rather than a special case genomic analyses computational approaches to phylogenetic reconstruction descriptive morphology versus morphometrics and integrating insights from archaeology into the interpretation of human fossils Contributors Markus Bastir Fred L Bookstein Claudine Cohen Richard G Delisle Robin Dennell Rob DeSalle John de Vos Emma M Finestone Huw S Groucutt Gabriele A Macho Fabrizzio Mc Manus Apurva Narechania Michael D Petraglia Thomas W Plummer J W F Reumer Jeff Rosenfeld Jeffrey H Schwartz Dietrich Stout Ian Tattersall Alan R Templeton Michael Tessler Peter J Waddell Martine Zilversmit

Modern Humans John F. Hoffecker, 2017-10-31 Modern Humans is a vivid

account of the most recent and perhaps the most important phase of human evolution the appearance of anatomically modern people Homo sapiens in Africa less than half a million years ago and their later spread throughout the world Leaving no stone unturned John F Hoffecker demonstrates that Homo sapiens represents a major transition in the evolution of living systems in terms of fundamental changes in the role of non genetic information Modern Humans synthesizes recent findings from genetics including the rapidly growing body of ancient DNA the human fossil record and archaeology relating to the African origin and global dispersal of anatomically modern people Hoffecker places humans in the broad context of the evolution of life emphasizing the critical role of genetic and non genetic forms of information in living systems as well as how changes in the storage transmission and translation of information underlie major transitions in evolution He also draws on information and complexity theory to explain the emergence of Homo sapiens in Africa several hundred thousand years ago and the rapid and unprecedented spread of our species into a variety of environments in Australia and Eurasia including the Arctic and Beringia beginning between 75 000 and 60 000 years ago This magisterial work will appeal to all with an interest in the ever fascinating field of human evolution

Humans in the Making Michel J. F. Dubois, 2020-12-15 The human specificity can be described by verticality bipedalism technique use articulated language high cognitive capacities complex society at three levels body mind social In this book is proposed an evolutionary process that make better understand how such humanity could have emerged in the long time more than 6 million years The process is based on a very early necessity to use technic for surviving correlated with neoteny which impulsed a darwinian evolutionary process with four distinguished punctuation described as neotenizations

The Emergence of Religion in Human Evolution Margaret Boone Rappaport, Christopher J. Corbally, 2019-12-09 Religious capacity is a highly elaborate neurocognitive human trait that has a solid evolutionary foundation This book uses a multidisciplinary approach to describe millions of years of biological innovations that eventually give rise to the modern trait and its varied expression in humanity s many religions The authors present a scientific model and a central thesis that the brain organs networks and capacities that allowed humans to survive physically also gave our species the ability to create theologies find sustenance in religious practice and use religion to support the social group Yet the trait of religious capacity remains non obligatory like reading and mathematics The individual can choose not to use it The approach relies on research findings in nine disciplines including the work of countless neuroscientists paleoneurologists archaeologists cognitive scientists and psychologists This is a cutting edge examination of the evolutionary origins of humanity s interaction with the supernatural It will be of keen interest to academics working in Religious Studies Neuroscience Cognitive Science Anthropology Evolutionary Biology and Psychology

Cities Monica L. Smith, 2019-04-16 A revelation of the drive and creative flux of the metropolis over time Nature This is a must read book for any city dweller with a voracious appetite for understanding the wonders of cities and why we re so attracted to them Zahi Hawass author of Hidden Treasures of Ancient Egypt A sweeping history of cities through the

millennia from Mesopotamia to Manhattan and how they have propelled Homo sapiens to dominance Six thousand years ago there were no cities on the planet Today more than half of the world's population lives in urban areas and that number is growing Weaving together archeology history and contemporary observations Monica Smith explains the rise of the first urban developments and their connection to our own She takes readers on a journey through the ancient world of Tell Brak in modern day Syria Teotihuacan and Tenochtitlan in Mexico her own digs in India as well as the more well known Pompeii Rome and Athens Along the way she presents the unique properties that made cities singularly responsible for the flowering of humankind the development of networked infrastructure the rise of an entrepreneurial middle class and the culture of consumption that results in everything from take out food to the tell tale secrets of trash Cities is an impassioned and learned account full of fascinating details of daily life in ancient urban centers using archaeological perspectives to show that the aspects of cities we find most irresistible and the most annoying have been with us since the very beginnings of urbanism itself She also proves the rise of cities was hardly inevitable yet it was crucial to the eventual global dominance of our species and that cities are here to stay

Mismatch Ronald Giphart, Mark van Vugt, 2018-02-15 Our brains evolved to solve the survival problems of our Stone Age ancestors so when faced with modern day situations that are less extreme they often encounter a mismatch Our primitive brains put us on the wrong foot by responding to stimuli that in prehistoric times would have prompted behaviour that was beneficial If you've ever felt an anxious fight or flight response to a presenting at a board meeting equivalent to facing imminent death by sabre toothed tiger then you have experienced a mismatch Mismatch is about the clash between our biology and our culture It is about the dramatic contrast between the first few million years of human history when humans lived as hunters and gatherers in small scale societies and the past twelve thousand years following the agricultural revolution which have led us to comfortable lives in a very different social structure Has this rapid transition been good for us How do we using our primitive minds try to survive in a modern information society that radically changes every ten years or so Ronald Giphart and Mark van Vugt show that humans have changed their environment so drastically that the chances for mismatch have significantly increased and these conflicts can have profound consequences Reviewed through mismatch

glasses social societal and technological trends can be better understood ranging from the popularity of Facebook and internet porn to the desire for cosmetic surgery to our attitudes towards refugees Mismatches can also affect our physical and psychological well being in terms of our attitudes to happiness physical exercise choosing good leaders or finding ways to feel better at home or work Finally Mismatch gives us an insight into politics and policy which could enable governments institutions and businesses to create an environment better suited to human nature its potential and its constraints This book is about converting mismatches into matches The better your life is matched to how your mind operates the greater your chances of leading a happy healthy and productive life

The Unstoppable Human Species John J. Shea, 2023-03-23 In *The Unstoppable Human Species* John Shea explains how the earliest humans achieved mastery over all but the most severe biosphere level extinction threats He explores how and why we humans owe our survival skills to our global geographic range a diaspora that was achieved during prehistoric times By developing and integrating a suite of Ancestral Survival Skills humans overcame survival challenges better than other hominins and settled in previously unoccupied habitats But how did they do it How did early humans endure long enough to become our ancestors Shea places how did they survive questions front and center in prehistory Using an explicitly scientific comparative and hypothesis testing approach *The Unstoppable Human Species* critically examines much archaeological mythology about prehistoric humans Written in clear and engaging language Shea's volume offers an original and thought provoking perspective on human evolution Moving beyond unproductive archaeological debates about prehistoric population movements *The Unstoppable Human Species* generates new and interesting questions about human evolution

The Secret of Our Success Joseph Henrich, 2017-10-17 How our collective intelligence has helped us to evolve and prosper Humans are a puzzling species On the one hand we struggle to survive on our own in the wild often failing to overcome even basic challenges like obtaining food building shelters or avoiding predators On the other hand human groups have produced ingenious technologies sophisticated languages and complex institutions that have permitted us to successfully expand into a vast range of diverse environments What has enabled us to dominate the globe more than any other species while remaining virtually helpless as lone individuals This book shows that the secret of our success lies not in our innate intelligence but in our collective brains on the ability of human groups to socially interconnect and learn from one another over generations Drawing insights from lost European explorers clever chimpanzees mobile hunter gatherers neuroscientific findings ancient bones and the human genome Joseph Henrich demonstrates how our collective brains have propelled our species genetic evolution and shaped our biology Our early capacities for learning from others produced many cultural innovations such as fire cooking water containers plant knowledge and projectile weapons which in turn drove the expansion of our brains and altered our physiology anatomy and psychology in crucial ways Later on some

collective brains generated and recombined powerful concepts such as the lever wheel screw and writing while also creating the institutions that continue to alter our motivations and perceptions Henrich shows how our genetics and biology are inextricably interwoven with cultural evolution and how culture gene interactions launched our species on an extraordinary evolutionary trajectory Tracking clues from our ancient past to the present The Secret of Our Success explores how the evolution of both our cultural and social natures produce a collective intelligence that explains both our species immense success and the origins of human uniqueness [Zamimolo's Story, 50,000 BC](#) Bonnye Matthews,2014-04-12 Bonnye Matthews is America s preeminent writer of prehistoric history Grace Cavelieri of The Poet and the Poem from the Library of Congress Zamimolo s Story 50 000 BC is book 3 in the popular Winds of Change series Follow Zamimolo on his quest to rescue Olomaru mia the woman who was to be his wife They face significant environmental changes in their new land from temperature change and lack of seasonal variation More importantly they face an entirely different set of living creatures They are surrounded by Volkswagen sized armadillos twenty foot tall sloths terror birds and short trunked camels Less than a day after their arrival a significant event occurs that has a profound effect on Zamimolo Read to see how the People manage with this huge change some of which involves several different groups of people already living in the area before they arrive The Winds of Change novel series views the peopling of the Americas primarily from research over the last 15 years The series takes the what if perspective What might it have been like if the Americas abounded in human life long before 12 000 years ago What author Bonnye Mathews has managed to do is to expertly craft a series of notably entertaining novels that incorporates new data into an historical fictional accounts that bring these ancient peoples alive Midwest Book Review [The SealEaters, 20,000 BC](#) Bonnye Matthews,2016-01-15 Bonnye presents a fascinating and fully developed new perspective on the intelligence and social behavior regarding Neanderthals that goes beyond the scope of traditional theories Warren Troy author of The Last Homestead The SealEaters 20 000 BC is book 5 and the last of the Winds of Change Series on the Peopling of the Americas This is a survival story of the Solutreans in southern France northern Spain As the Ice Age advances seals from the north have beached on the shores of the People and the SealEaters have come to depend on them for their major food source The SealEaters face advancing ice from the north and for the first time warring groups beyond the mountains to the east and south In search of a new land a small number of SealEaters travel the arc formed by the ice sheets eating seals along the way across the Atlantic Ocean to the east coast of what is now North America They survey the land and groups of people living there trying to find a new living place With this move to the new land and the influence of new people they find there will the People be able to retain their cohesiveness and peaceful ways The Winds of Change affect individuals groups localities regions or the entire world and all life responds The first four books exist in a world of peace following the eruption of a super volcano With the last great Ice Age the lives of the People change from a world of peace required for survival where in fighting was a luxury they could not afford to a world of war well established by 11 700 years ago that

A User's Guide—The Sequel Herb Gruning,2022-08-30 There is science and there is religion and never the twain shall meet Is that to be the fate of these two disciplines Having one foot in the religious world and the other in the scientific can be as precarious as attempting to remain astride two logs in a river In this sequel to A User s Guide to Our Present World What Everyone Should Know about Religion and Science complexions of what religion and science look like today are investigated It discusses topics from Jesus and family values evangelists who arrive at your door discrimination and racism and the dark side for religion to delicate balances impacting us and the world climate change the pandemic and how ancient structures like Stonehenge and the pyramids could have been built for science The study then turns to theological implications of scientific theories including relativity and quantum Sure to ruffle the feathers of some from both sides the examination focuses on how scientific paradigms fail to cohere with traditional theological doctrines and presents the potentially uncomfortable view that scientific revolutions might warrant a corresponding revolution for theology itself
