Kapetsky, José Aguilar-Manjarrez, Food and Agriculture Organization of the United Nations, 2007-01-01 The objective of this document is to illustrate the ways in which Geographical Information Systems GIS remote sensing and mapping can play a role in the development and management of marine aquaculture The perspective is global The approach is to employ example applications that have been aimed at resolving many of the important issues in marine aquaculture The underlying purpose is to stimulate the interest of individuals in the government industry and educational sectors of marine aquaculture to make more effective use of these tools A brief introduction to spatial tools and their use in the marine fisheries sector precedes the example applications The most recent applications have been selected to be indicative of the state of the art allowing readers to make their own assessments of the benefits and limitations of use of these tools in their own disciplines Also published in Chinese and Spanish *Coastal and Marine Geo-Information Systems* David R. Green, Stephen D. King, 2006-04-11 The emphasis now placed on the concept of sediment cells as boundaries for coastal defence groups and the development of SMPs should help CPAs realise the importance of natural processes at the coast when designing defence and protection schemes However this will only be the case where defence groups exist and where CPAs take up the challenge of developing SMPs Coastal landscapes have been produced by the natural forces of wind waves and tides and many are nationally or internationally important for their habitats and natural features Past practices at the coast such as the construction of harbours jetties and traditional defence systems may have contributed to the deterioration of the coast English Nature 1992 have argued that if practices and methods of coastal defence are allowed to continue then coastlines would be faced with worsening consequences including The loss of mudflats and the birds which live on them Damage to geological Sites of Special Scientific Interest SSSIs and scenic heritage by erosion due to the stabilisation of the coast elsewhere Cutting of

sediment supplies to beaches resulting in the loss of coastal wildlife Cessation through isolation from coastal processes of the natural operation of spits with serious deterioration of rare plants animals and geomorphological and scenic qualities English Nature 1992 A number of designations provided by national and international legislation do exist to aid conservation

*Time-Integrative Geographic Information Systems* Thomas Ott, Frank Swiaczny, 2012-12-06 The book deals with the integration of temporal information in Geographic Information Systems The main purpose of an historical or time integrative GIS is to reproduce spatio temporal processes or sequents of events in the real world in the form of a model The model thus making them accessible for spatial query analysis and visualization This volume reflects both theoretical thoughts on the interrelations of space and time as well as practical examples taken from various fields of application e g business data warehousing demographics history and spatial analysis Undersea with GIS Dawn J. *Environmental Modeling with Stakeholders* Steven Gray, Michael Paolisso, Rebecca Jordan, Stefan Gray, 2016-12-16 This volume brings together in a central text chapters written by leading scholars working at the intersection of modeling the natural and social sciences and public participation This book presents the current state of knowledge regarding the theory and practice of engaging stakeholders in environmental modeling for decision making and includes basic theoretical considerations an overview of methods and tools available and case study examples of these principles and methods in practice Although there has been a significant increase in research and development regarding participatory modeling a unifying text that provides an overview of the different methodologies available to scholars and a systematic review of case study applications has been largely unavailable This edited volume seeks to address a gap in the literature and provide a primer that addresses the growing demand to adopt and apply a range of modeling methods that includes the public in environmental assessment and management The book is divided into two main sections The first part of the book covers basic considerations for including stakeholders in the modeling process and its intersection with the theory and practice of public participation in environmental decision making The second part of the book is devoted to specific applications and

products of the various methods available through case study examination This second part of the book also provides insight from several international experts currently working in the field about their approaches types of interactions with stakeholders models produced and the challenges they perceived based on their practical experiences
