The Handbook of Groundwater Engineering Jacques W. Delleur, 2006-11-16 A complete treatment of the theory and practice of groundwater engineering The Handbook of Groundwater Engineering Second Edition provides a current and detailed review of how to model the flow of water and the transport of contaminants both in the unsaturated and saturated zones covers the production of groundwater and the remediation of contaminated groundwater

Quantitative Assessment of Groundwater and Surface Water Interactions in the Hailu River Basin, Erdos Plateau, China Zhi Yang, 2018-04-17 This study presents a multi disciplinary approach for investigating the interactions between groundwater

and surface water in the semi arid Hailiutu catchment in the Erdos Plateau Northwest China The study consists of statistical detection of river flow regime shifts at the basin level multiple in situ measurements for quantifying groundwater discharges using hydraulic hydrochemical and temperature methods at a local scale analysis and simulation of impacts of different land use scenarios on groundwater and surface water interactions at the sub catchment scale and the quantification of temporal and spatial groundwater and surface water interactions with hydrochemical tracers and modelling methods at the basin scale The study found that the river flow consists of mainly groundwater discharges at all scales The river flow regime has been intensively altered by human activities such as the construction of reservoirs water diversion groundwater exploitation and reforestation Water use by plants and crops consumes majority of the precipitation Groundwater sustains vegetation growth and feeds river discharges The water resources and ecosystem management priority should reduce evaporative water uses by promoting dry resistant plant species for vegetating sand dunes and lower irrigation demand crops for socio economic development Furthermore the Hailiutu River catchment must manage the groundwater recharge for water resource conservation and the maintenance of healthy ecosystems

Distributed Hydrologic Modeling Using GIS Baxter E. Vieux, 2016-08-19 This book presents a unified approach for modeling hydrologic processes distributed in space and time using geographic information systems GIS This Third Edition focuses on the principles of implementing a distributed model using geospatial data to simulate hydrologic

processes in urban rural and peri urban watersheds The author describes fully distributed representations of hydrologic processes where physics is the basis for modeling and geospatial data forms the cornerstone of parameter and process representation A physics based approach involves conservation laws that govern the movement of water ranging from precipitation over a river basin to flow in a river Global geospatial data have become readily available in GIS format and a modeling approach that can utilize this data for hydrology offers numerous possibilities GIS data formats spatial interpolation and resolution have important effects on the hydrologic simulation of the major hydrologic components of a watershed and the book provides examples illustrating how to represent a watershed with spatially distributed data along with the many pitfalls inherent in such an undertaking Since the First and Second Editions software development and applications have created a richer set of examples and a deeper understanding of how to perform distributed hydrologic analysis and prediction This Third Edition describes the development of geospatial data for use in Vflo physics based distributed modeling
