Groundwater Availability Of The Mississippi Embayment:

Groundwater Availability of the Mississippi Embayment Brian R. Clark, Jason J. Gurdak, Rheannon M. Hart, 2011

Groundwater is an important resource for agricultural and municipal uses in the Mississippi embayment. Arkansas ranks first in the Nation for rice and third for cotton production with both crops dependent on groundwater as a major source of irrigation requirements. Multiple municipalities rely on the groundwater resources to provide water for industrial and public use which includes the city of Memphis, Tennessee. The demand for the groundwater resource has resulted in groundwater availability issues in the Mississippi embayment including 1 declining groundwater levels of 50 feet or more in the Mississippi River Valley alluvial aquifer in parts of eastern Arkansas from agricultural pumping, 2 declining groundwater levels of over 360 feet over the last 90 years in the confined middle Claiborne aquifer in southern Arkansas and northern Louisiana from municipal pumping, and 3 litigation between the State of Mississippi and a Memphis water utility over water rights in the middle Claiborne aquifer. To provide information to stakeholders addressing the groundwater availability issues, the U.S. Geological Survey Groundwater Resources Program supported a detailed assessment of groundwater availability through the Mississippi Embayment Regional Aquifer Study (MERAS). This assessment included 1 an evaluation of how these resources have changed over time through the use of groundwater budgets, 2 development of a numerical modeling tool to assess system responses to stresses from future human uses and climate trends, and 3 application of statistical tools to evaluate the importance of individual observations within a groundwater monitoring network. An estimated 12 million acre feet per year (11 billion gallons per day) of groundwater was pumped in 2005 from aquifers in the Mississippi embayment. Irrigation constitutes the largest groundwater use, accounting for approximately 10 million acre feet per year (9 billion gallons per day) in 2000 from the Mississippi River Valley alluvial aquifer in Arkansas, Louisiana, Mississippi, and Missouri, and to a lesser extent in Illinois, Kentucky, and Tennessee. Predevelopment groundwater flow is represented in the MERAS model as a steady state stress period assumed to be prior to 1870. The simulated groundwater flow budget indicates the largest predevelopment inflow to the system is net recharge to the alluvial aquifer. This inflow is balanced by outflow to gaining streams. Overall, water enters as net recharge to the alluvial aquifer or through outcrop areas of the various hydrogeologic units. Away from the outcrop areas, groundwater flow in the deeper formations is primarily upward into overlying units, ultimately discharging to streams through the alluvial aquifer. Total net recharge and discharge (sum of inflows or outflows) for the model ranged from about 0.66 million acre feet per year during predevelopment to 20.16 million acre feet per year by the end of the simulation (final simulated irrigation period in summer of 2006). This change in the model budget reflects increases in withdrawals compared to predevelopment conditions. Cumulative storage within aquifers simulated in the MERAS model indicates overall depletion of 140 million acre feet equivalent to 2.8 feet of water covering the entire study area. Postdevelopment inflow to the system is still through net recharge to the alluvial aquifer and the outcrop areas of the several

hydrogeologic units however the flow between each unit is no longer upward to the alluvial aquifer Groundwater flow during the summer of 2006 was primarily downward to offset demand from pumping Early in the model simulation 1870 1920s the primary components of the water budget were simulated as outflow from stream leakage and inflow from net recharge As pumpage increased through time water that would otherwise flow to streams reversed and net stream leakage became an inflow to the system The largest reversals began in the mid 1980s but indications of the reversal began in the early 1960s with a trend in loss of streamflow leakage coupled with the first consistent inflow from storage While groundwater pumped out of the alluvial aquifer was derived primarily from storage pumpage out of the middle Claiborne aquifer was derived primarily from other aquifers up to 15 percent from the alluvial aquifer followed by flow from storage and net recharge The potential consequences of climate change have been identified as a major concern facing the sustainability of the Nation s groundwater resources To address this concern two climate simulations were developed through the use of the MERAS model by extending the simulation period by 30 years to the year 2038 using extrapolated precipitation based on frequency analysis of historic climate cycles There is little difference between the dry and wet scenarios in terms of percent water level change Both scenarios resulted in 14 6 to 13 9 percent of the area containing more than 100 feet of decline 14 5 to 13 8 percent containing between 75 and 100 feet of decline and 15 8 to 15 7 percent containing 51 to 75 feet of decline in the alluvial aquifer The middle Claiborne aquifer water level changes also were similar between the two scenarios These scenarios indicate that even with a 25 percent increase in precipitation from that of the dry scenario there is little difference in the resultant water levels This is in large part because of the magnitude of differences between changes in net recharge and changes in pumping When compared to the volume of water pumped out of the system the effect of this change in net recharge is negligible The groundwater level monitoring network used to construct the 2007 middle Claiborne aquifer potentiometric surface was used as an example case to demonstrate statistical technique and to evaluate the importance of individual groundwater level observations To calculate the importance of each water level observation to a prediction predictions were specified as water level altitudes near the end of the dry scenario simulation These predictions were located near the center of cones of depression Many of the observations that have a high importance are in close proximity to stressed areas of the aquifer

Groundwater Availability of the Mississippi Embayment U.S. Department of the Interior, 2014-03-04 The study described in this report initiated by the U S Geological Survey in 2006 was designed to evaluate available fresh groundwater reserves within the Mississippi embayment South Central United States as an area within a broader national assessment The goals of the national assessment are to document effects of human activities on water levels and groundwater storage explore climate variability effects on the regional water budget and evaluate the adequacy of data networks at a regional scale The Mississippi embayment was chosen as a study area in the national assessment because of the substantial dependency on groundwater for agriculture and municipal needs *The Mississippi*

Embayment Regional Aquifer Study (Meras) U.S. Department of the Interior, 2014-03-04 Fresh groundwater in the Mississippi embayment can be found in alternating formations of sand silt and clay The uppermost of these formations is the Mississippi River Valley alluvial aquifer alluvial aquifer which can provide well yields of 300 to 2 000 gal min The alluvial aquifer exists at land surface and covers much of the embayment area within the Mississippi Alluvial Plain **U.S. Geological Survey Professional Paper** ,1998 Hydrogeology and Ground-water Flow in the Memphis and Fort Pillow Aquifers in the Memphis Area, Tennessee J. Groundwater Availability Of The Mississippi Embayment Introduction

In today's digital age, the availability of Groundwater Availability Of The Mississippi Embayment books and manuals for download has revolutionized the way we access information. Gone are the days of physically flipping through pages and carrying heavy textbooks or manuals. With just a few clicks, we can now access a wealth of knowledge from the comfort of our own homes or on the go. This article will explore the advantages of Groundwater Availability Of The Mississippi Embayment books and manuals for download, along with some popular platforms that offer these resources. One of the significant advantages of Groundwater Availability Of The Mississippi Embayment books and manuals for download is the cost-saving aspect. Traditional books and manuals can be costly, especially if you need to purchase several of them for educational or professional purposes. By accessing Groundwater Availability Of The Mississippi Embayment versions, you eliminate the need to spend money on physical copies. This not only saves you money but also reduces the environmental impact associated with book production and transportation. Furthermore, Groundwater Availability Of The Mississippi Embayment books and manuals for download are incredibly convenient. With just a computer or smartphone and an internet connection, you can access a vast library of resources on any subject imaginable. Whether you're a student looking for textbooks, a professional seeking industry-specific manuals, or someone interested in self-improvement, these digital resources provide an efficient and accessible means of acquiring knowledge. Moreover, PDF books and manuals offer a range of benefits compared to other digital formats. PDF files are designed to retain their formatting regardless of the device used to open them. This ensures that the content appears exactly as intended by the author, with no loss of formatting or missing graphics. Additionally, PDF files can be easily annotated, bookmarked, and searched for specific terms, making them highly practical for studying or referencing. When it comes to accessing Groundwater Availability Of The Mississippi Embayment books and manuals, several platforms offer an extensive collection of resources. One such platform is Project Gutenberg, a nonprofit organization that provides over 60,000 free eBooks. These books are primarily in the public domain, meaning they can be freely distributed and downloaded. Project Gutenberg offers a wide range of classic literature, making it an excellent resource for literature enthusiasts. Another popular platform for Groundwater Availability Of The Mississippi Embayment books and manuals is Open Library. Open Library is an initiative of the Internet Archive, a non-profit organization dedicated

to digitizing cultural artifacts and making them accessible to the public. Open Library hosts millions of books, including both public domain works and contemporary titles. It also allows users to borrow digital copies of certain books for a limited period, similar to a library lending system. Additionally, many universities and educational institutions have their own digital libraries that provide free access to PDF books and manuals. These libraries often offer academic texts, research papers, and technical manuals, making them invaluable resources for students and researchers. Some notable examples include MIT OpenCourseWare, which offers free access to course materials from the Massachusetts Institute of Technology, and the Digital Public Library of America, which provides a vast collection of digitized books and historical documents. In conclusion, Groundwater Availability Of The Mississippi Embayment books and manuals for download have transformed the way we access information. They provide a cost-effective and convenient means of acquiring knowledge, offering the ability to access a vast library of resources at our fingertips. With platforms like Project Gutenberg, Open Library, and various digital libraries offered by educational institutions, we have access to an ever-expanding collection of books and manuals. Whether for educational, professional, or personal purposes, these digital resources serve as valuable tools for continuous learning and self-improvement. So why not take advantage of the vast world of Groundwater Availability Of The Mississippi Embayment books and manuals for download and embark on your journey of knowledge?
