 herbalists Back cover      **Eating Fossil Fuels** Dale Allen Pfeiffer, 2006-10-01 The miracle of the Green Revolution was made  
 possible by cheap fossil fuels to supply crops with artificial fertilizer pesticides and irrigation Estimates of the net energy  
 balance of agriculture in the United States show that ten calories of hydrocarbon energy are required to produce one calorie  
 of food Such an imbalance cannot continue in a world of diminishing hydrocarbon resources Eating Fossil Fuels examines the  
 interlinked crises of energy and agriculture and highlights some startling findings The worldwide expansion of agriculture  
 has appropriated fully 40 percent of the photosynthetic capability of this planet The Green Revolution provided abundant  
 food sources for many resulting in a population explosion well in excess of the planet's carrying capacity Studies suggest that  
 without fossil fuel based agriculture the United States could only sustain about two thirds of its present population For the  
 planet as a whole the sustainable number is estimated to be about two billion Concluding that the effect of energy depletion  
 will be disastrous without a transition to a sustainable re localized agriculture the book draws on the experiences of North  
 Korea and Cuba to demonstrate stories of failure and success in the transition to non hydrocarbon based agriculture It urges  
 strong grassroots activism for sustainable localized agriculture and a natural shrinking of the world's population      The
