A Practical Guide to Disruption and Productivity Loss on Construction and Engineering Projects Roger Gibson, 2015-02-25
 Disruption of a construction project is of key concern to the contractor as any delay to the project will involve the contractor in financial loss unless those losses can be recovered from the employer. It is however acknowledged that disruption claims in construction are difficult to prove usually the result of poor or inaccurate project records but the cost of lost productivity or reduced efficiency to the contractor under these circumstances is very real. *Practical Guide to Disruption and Productivity Loss on Construction Engineering Projects* is clearly written to explain the key causes of disruption and productivity loss. Disruption claims rest on proof of causation so it discusses the project records that are necessary to demonstrate the causes of disruption, lost productivity and reduced efficiency in detail. Quantification of a disruption claim in terms of delay to activities and the associated costs are also fully discussed. With many worked examples throughout the text, this will be an essential book for anyone either preparing or assessing a disruption and loss of productivity claims including architects, contract administrators, project managers and quantity surveyors as well as contractors, contracts consultants and construction lawyers.

A Contractor's Guide to Planning, Scheduling, and Control Len Holm, 2022-02-02
 A MUST HAVE PRACTICAL GUIDE THAT CONNECTS SCHEDULING AND CONSTRUCTION PROJECT MANAGEMENT. In *A Contractor's Guide to Planning, Scheduling, and Control*, an experienced construction professional delivers a unique and effective approach to the planning and scheduling responsibilities of a construction project manager, superintendent or jobsite scheduler. The author describes the complete scheduling cycle from preconstruction and scheduling through controls and closeout from the perspective of real world general contractors and scheduling professionals. Filled with tools and strategies that actually help contractors build projects and light on academic jargon and terminology that's not used in the field, the book includes examples of real craft workers and subcontractors like electricians, carpenters and drywallers to highlight the concepts discussed within. Finally, an extensive appendix rounds out the book with references to additional resources for the reader. This comprehensive guide includes Thorough introductions to construction contracting, lean construction, planning, subcontractor management and more. A comprehensive exploration of a commercial case study that's considered in each chapter, connecting critical topics with a consistent through line. End of chapter review questions and

applied exercises Access to a companion website that includes additional resources and for instructors solutions additional case studies sample estimates and sample schedules Perfect for upper level undergraduate students in construction management and construction engineering programs A Contractor s Guide to Planning Scheduling and Control is also an irreplaceable reference for general contractors and construction project management professionals

Modeling of coal gasification for fuel cell utilization M. L. Finson, United States. Department of Energy. Division of Fossil Fuel Utilization, 1978 This report summarizes recent progress on a DOE supported program to construct computer models for potential future combined coal gasification fuel cell power generation systems The approach is to develop physically well founded descriptions for the performance of both molten carbonate fuel cells and coal gasifiers and to utilize the models to prepare performance maps for each device enabling selection of the optimum interfaces between fuel cells and gasifiers In a previous phase of the study we identified entrained flow gasification as the most appropriate type for providing fuel cell feed gas on the basis of off gas composition and the ability to handle a wide range of coal types Accordingly a substantial portion of the current effort is concerned with the development of a computer model for entrained flow gasifiers Furthermore several scaling laws have been developed for fuel cell performance Mostly based on equilibrium open circuit considerations to date these address such issues as the requirements for avoiding carbon deposition the potential effects of methane conversion and the distribution of heat sources and sinks within the cell
