is one of the most popular of temperate fruit crops with consumers and is grown commercially in more than 40 countries of
the world in temperate Mediterranean subtropical and arid regions of all continents The sour cherry is cultivated in fewer
countries mainly in Europe and the USA and is used mainly in processed cherry products Until recently horticultural
improvement of cherries as a commercial crop has been slow and major production problems such as bird damage rain
induced cracking and bacterial diseases have remained However in the last 25 years major developments have occurred New
improved varieties of sweet cherry have been bred which have larger fruit are more disease resistant and set fruit more
reliably Improved sour cherry varieties have also been bred and mechanised systems of harvesting introduced New dwarfing
rootstocks are now being released This book provides a comprehensive review of all of these topics and many more It covers
all aspects of the botany production and uses of sweet and sour cherries and represents a definitive reference work for
