**Intellectual Property Statistics** Eskil Ullberg, 2023-09-01 Patents and other intellectual property IP rights are increasingly part of cross border trade in their own rights Patent transfers and

patent licensing between inventors investors and innovators create new business strategies of cooperation in the creation of new technology increasing the productivity in the stock of technology assets and efficient distribution of these rights The rights bundles are then used also increasingly in products and services being traded cross border furthering economic efficiency created by this cooperative strategy Today s international trade statistics however lack statistics explicitly on trade flows from ideas based on IP rights This book offers an idea based statistical framework to measure IP i e increasingly depends on trade in ideas and explores ways to introduce the framework into international standards Specifically it offers a theory of value to measure the flows from IP and an asset view of IP to deal with allocation of resources and who owns these rights This is then contrasted with the current way IP is treated and a gap analysis is used to identify what needs to change in the standards This new framework can help develop theories policies practices and inform the decisions needed to better leverage the human capital formation of inventors everywhere Praise for Intellectual Property Statistics In this book Prof Ullberg has undertaken a Herculean task to lay out a paradigm for the collection of IP Statistics to ensure that the market of trade in ideas has the information and data necessary to function well the volume should be viewed as a starting point a work in progress but an important one that could very well influence the development of this important set of data on trade in ideas At a time when global issues require both new ideas and the spread of those ideas widely to help ensure both economic growth and continued global economic convergence data that helps us monitor and evaluate what is happening in trade in ideas will be extremely valuable Robert Koopman American University Washington DC USA and Former Chief Economist World Trade Organization Geneva Switzerland

Anderman,2007-05-10 The purpose of this book is to examine the experience of a number of countries in grappling with the problems of reconciling the two fields of competition policy and intellectual property rights The first part of the book

indicates the variation in legislative models as well as the wide variety of judicial and administrative doctrines that have been used. The jurisdictions selected for study are the three major trading blocks with the longest experience of case law: the EU, the USA and Japan, and three less populous countries with open economies: Australia, Ireland and Singapore. In the second part of the book we look at a number of issues closely related to the interface between competition law and intellectual property rights. Separate chapters analyse the issue of parallel trading and exhaustion of IPRs, the issue of technology transfer and the economics of the interface between intellectual property and competition law.
