4 Repair and sealing of valve 238

**Danger!**

Defective valves pose a serious risk to persons and property in the danger area. For safety reasons, it is **forbidden** to repair pipe fracture safety valves.

- Always replace pipe fracture safety valves with all associated parts, and install only new valves supplied and proved by the manufacturer.
- Return defective valves to the manufacturer, indicating the problem or damage you have observed.

4.1 Sealing work

**Note!**

In the event of external leakage of the valves, the valves may only be repaired, if this work does not require the dismantling of the valve.

To repair the valve, use only the seal kit provided by the manufacturer.

4.2 Assembly and dismantling of the pipe fracture safety valves

**Danger!**

The dismantling, installation or sealing of the valves requires workers to access the danger area of the machine. This carries risks for the mechanics, as equipment might move uncontrolled when a valve/hydraulic circuit is opened.

Never open the hydraulic circuit of the pipe fracture safety valves while the circuit is pressurized.

- Place the unloaded attachment on the ground (system side of the cylinder must be fully depressurized).
- Depressurize the pipe fracture safety valve(s) by actuating the pilot control device for lifting and lowering to the stop and holding it in this position while the diesel engine is off (ignition and pilot control system on).
- Release the tank pressure.

After the hydraulic circuit of the valves 238 is opened, certain problems might occur caused by air in the control circuit. The circuit must therefore be bled (correct escaping air), see 4.3.

4.3 Bleeding of pipe fracture safety valve 238, see Fig. 4

- Remove the cover cap from the measuring neck 32 at the connections P8 and T.
- If there is no measuring neck 32: Remove the screw plug from the connections P8 and T.
- Screw the 1/2"x1.5 screw coupling assembly (part no. 11) from group 2.01) into the bore.
- Install the Minomax high pressure hose between the connection P8 and connection T.
- Activate the hoist cylinder to retract it (keep pilot control unit pushed forward).
- % The control circuit is bled.
- Put unloaded attachments down on flat and firm ground.
- Release the tank pressure and the load holding valve(s) by actuating the pilot control unit for lowering to the stop and holding it in this position for some time while the diesel engine is off.
