**Cassian's Conferences** Christopher J. Kelly, 2016-04-08 This book explores Cassian's use of scripture in the Conferences especially its biblical models to convey his understanding of the desert ideal to the monastic communities of Gaul Cassian intended the scriptures and implicitly the Conferences to be the voices of authority and orthodoxy in the Gallic environment He interprets familiar biblical characters in unfamiliar ways that exemplify his ideal By imitating their actions the monk enters a seamless lineage of authority stretching back to Abraham This book demonstrates how the scriptures functioned as a dynamic force in the lives of Christian monks in the fourth and fifth centuries emphasizes the importance of Cassian in the development of the western monastic tradition and offers an alternative to the sometimes problematic descriptions of patristic exegesis as allegory or typology Cassian has been described as little more than a provider of information about Egyptian monasticism but a careful reading of his work reveals a sophisticated agenda to define and institutionalize orthodox monasticism in the Latin West

Longenecker,1998 This volume written by eleven first class scholars brings into focus the Resurrection message of the New Testament Much more than just biblical exposition these essays demonstrate how the resurrection both provides the basis for joyful living now despite the shadow of death and undergirds the Christian belief in a future after death *The Paradox of Political Philosophy* Jacob Howland,1998 An examination of Socrates trial as played out in the Apology Theaetetus Euthyphro Cratylus Sophist and Statesman Finding that the heart of the dialogues is the rivalry between the characters of the Stranger of Elea and Socrates the author devotes a chapter to each dialogue and explores the Stranger of Elea s criticism that the uncompromising pursuit of knowledge conflicts with the task of weaving together humans into a political community The melding of the arguments of Socrates and the Stranger of Elea the author suggests is the best path to understanding Plato s political philosophy Annotation copyrighted by Book News Inc Portland OR **The Bibliographic Index** ,2005 *The Elementary Forms of the New Religious Life* Roy Wallis,2019-03-19 This book first published in 1984 examines the whole range of new religious movements which appeared in the 1960s and 1970s in the West It develops a wide ranging theory of these new religions which explains many of their major characteristics Some of the movements are well known such as Scientology Krishna Consciousness and the Unification Church Others such as the Process Meher Baba and 3 HO are much less known While some became international others remained local in other ways too such as style belief organisation they exhibit enormous diversity The movements studied here are classified under three ideal types world rejecting world affirming and world accommodating and from here the author develops a theory of the origins recruitment base characteristics and development patterns which they display The book offers a critical exploration of the theories of the new religions and analyses the highly contentious issue of whether they reflect the process of secularisation or whether they are a countervailing trend marking the resurgence of religion in the West **The Making of Human Concepts** Denis Mareschal,Paul C. Quinn,S. E. G. Lea,2010 Human adults appear different from other animals in their ability to form abstract mental representations that go beyond perceptual similarity In short they can conceptualize the world This apparent uniqueness leads to an immediate puzzle WHEN and HOW does this abstract system come into being To answer this question we need to explore the origins of adult concepts both developmentally and phylogenetically When does the developing child acquire the ability to use abstract concepts Does the transition occur around 2 years with the onset of symbolic representation and language Or is it independent of the emergence of language When in evolutionary history did an abstract representational system emerge Is there something unique about the human brain How would a computational

system operating on the basis of perceptual associations develop into a system operating on the basis of abstract relations Is this ability present in other species but masked by their inability to verbalise abstractions Perhaps the very notion of concepts is empty and should be done away with altogether This book tackles the age old puzzle of what might be unique about human concepts Intuitively we have a sense that our thoughts are somehow different from those of animals and young children such as infants Yet if true this raises the question of where and how this uniqueness arises What are the factors that have played out during the life course of the individual and over the evolution of humans that have contributed to the emergence of this apparently unique ability This volume brings together a collection of world specialists who have grappled with these questions from different perspectives to try to resolve the issue It includes contributions from leading psychologists neuroscientists child and infant specialists and animal cognition specialists Taken together this story leads to the idea that there is no unique ingredient in the emergence of human concepts but rather a powerful and potentially unique mix of biological abilities and personal and social history that has led to where the human mind now stands A must read for students and researchers in the cognitive sciences
