**Bias in the Workplace and Society** Douglas G. Long, 2024-10-30 *Bias in the Workplace and Society* looks at the causes and management of the biases that underpin all behavior inclusive of discrimination prejudice and stereotyping that can occur in the workplace and in everyday contexts It considers how such biases are developed in relation to societal and global issues and explores the manifestations of bias that are illustrated across a variety of situations The book is based on the premise that everyone is biased and there is no such thing as an unbiased person We cannot eliminate bias but we can manage it Grounded in the latest research the book focuses on the impact of biases as they are manifested in everyday life The first three chapters look at the reality of bias how it develops and how it is then reinforced by four forces politics business religion and social media From this point it moves to explore the

impact of bias across ten different areas and for each it encourages discussion and debate as to the reality of impact. It asks the reader to consider the possibility that they are personally impacted by unconscious and conscious biases. The final two chapters then draw everything together challenging the reader to realistically assess the reality of both unconscious and conscious biases in their life before moving to provide guidelines as to how biases can be managed. The point is made that behavioural change as a result of this self examination is optional; it is a personal decision. This book is suitable for all persons concerned about the impact of bias and particularly students of management, leadership, HRM, diversity and decision making.

In 40 chapters it covers the most important aspects of attention research from the areas of cognitive psychology, neuropsychology, human and animal neuroscience, computational modelling and philosophy. The book is divided into 4 main sections. Following an introduction

from Michael Posner the book starts by looking at theoretical models of attention. The next two sections are dedicated to spatial attention and non spatial attention respectively. Within section 4 the authors consider the interactions between attention and other psychological domains. **Remembering** Fergus Craik, 2021-06-10 Memory is typically thought of as a set of neural representations, memory traces that must be found and reactivated in order to be experienced. It is often suggested that memory traces are represented by a hierarchically organized system of analyzers, modified, sharpened and differentiated by encounters with successive events. Remembering: An activity of mind and brain is the magnum opus of one of the leading figures in the psychology of memory. It sets out Fergus Craik's current view of human memory as a dynamic activity of mind and brain. The author argues that remembering should be understood as a system of active cognitive processes, similar to, perhaps identical to, the processes underlying attending, perceiving and thinking. Thus

encoding processes are essentially viewed as the mental activities involved in perceiving and understanding and retrieval is described as the partial reactivation of these same processes This account proposes that episodic and semantic memory should be thought of as levels in a continuum of specificity rather than as separate systems of memory In addition the book presents Craik's views on working memory and on age related memory impairments In the latter case the losses are attributed largely to a difficulty with the self initiation of appropriate encoding and retrieval operations compensated when needed by support from the external environment The development of these ideas is discussed throughout the book and illustrated substantially by experiments from the author's lab but also by empirical and theoretical contributions from other researchers A broad account of current ideas and findings in contemporary memory research but viewed from the author's personal theoretical standpoint Remembering An activity of mind and brain will be essential for researchers graduate and postdoctoral students working in the field of human memory

part II explores calling across disciplines and eras from the 1500s to the present Finally part III unifies all conversations in a comprehensive theory then discusses its application and implications for practitioners and organizations With a strong theoretical grounding the book also incorporates practical applications supported by case studies Anyone interested in ethics or management and spirituality will benefit from reading this book Please visit [www.conversationsaboutcalling.com](http://www.conversationsaboutcalling.com) to rate the book and write a review
