

Sustainably cooling buildings is about prioritising and combining all practices that reduce energy needs at city, building, individual and technological level, while also considering the local context and future climate change.

There is no one-size-fits-all solution and incorporating equitable access to cooling for the most vulnerable is part of the strategy. This visual offers non-exhaustive examples of options that can be combined and adopted.

3 Individual awareness, behaviour and good practices: non-exhaustive examples

Opening windows at night and close blinds during the day

Use of active cooling systems only if needed

Reduction use of AC (e.g. set thermostat to 22°C)

Targeting of tailored communications and awareness raising to the most vulnerable

Creating solidarity networks to help people look after each other

Developing low energy efficient cooling technology for extreme temperatures

4 Innovation to be considered
