Mayer,C.B. Saper,2000-02-03 The current volume focuses on several key aspects of mind brain body interactions in health and disease including specific examples of interactions between body and brain mechanisms underlying the response of the system to stressors the role of early life events in permanently biasing the responsiveness of the system and practical implications of mind body interactions in human disease The volume on Biological Basis for Mind Body Interactions is organized into 6 major sections each dealing with a unique aspect of the general topic After establishing the relationship between mind brain and emotions the first section deals with general neurobiological aspects mediating the effect of stress on various organ systems including the immune and cardiovascular system The second section covers the topic of how early life stressor can permanently alter responsiveness of the nervous system in animals and in man The third section deals with influences of the internal environment mediated by neuroendocrine and visceral afferent pathways on the CNS The fourth section which deals with influences of body on the brain focuses on mechanisms involved in perception and modulation of pain The fifth section deals with influences of the mind brain on the body with an emphasis on central and peripheral mechanisms of autonomic control of body functions The last section deals with a series of practical issues of mind body treatments including acupuncture breathing body work and meditation In addition issues such as cost effectiveness and research aspects are discussed Authors in this last section frequently refer to topics and mechanisms addressed in the early sections making it a truly integrated volume The unique aspect of the volume is the integration of state of the art research information on biological and practical aspects of mind brain body interactions It is based on the beliefs of the editors and participants that the traditional separation of mind and body in research and in treatment of human disease is obsolete and needs to be replaced with a new unifying paradigm Ironically this evolving paradigm shares many similarities with ancient pre Cartesian paradigms of health and disease *Somatic Movement Dance Therapy* Amanda Williamson,2023-04-20 This book focuses on Somatic Movement Dance Therapy and the importance of self regulation and co regulation The chapters attend to self regulating different tissues through movement breath sound and the imagination Throughout the book the

author shares processes and practices that support participants to balance their living tissues moving from sympathetic arousal into parasympathetic ease and release The study of the autonomic nervous system and how to innervate the parasympathetic through breath awareness heart sensing and interoception is the central through line in the book Uniquely Williamson attends to the anatomical and physiological complexity underlying the apparent simplicity of somatic movement dance practice How to sense perceive and move with attuned awareness of specific body tissues such the skeletal muscular and craniosacral system invites the reader into a deep anatomical and physiological excavation of self regulation The interconnectivity of fascia and the importance of cardioception breath awareness and gravity lie at the heart of this book Sensory perceptual awareness of the heart is foregrounded as the most important ingredient in the efficacy of practice as well as gravi ception soft tissue rolling and fascial unwinding Includes a collective foreword from Sarah Whatley Daniel Deslauriers Celeste Snowber and Karin Rugman This is a must read practice as research book for under and postgraduate students researchers and educators and especially important for practitioners who feel the weight and condescension of the mechanistic paradigm
