Janert,2010-11-11

Collecting data is relatively easy but turning raw information into something useful requires that you know how to extract precisely what you need. With this insightful book, intermediate to experienced programmers interested in data analysis will learn techniques for working with data in a business environment. You'll learn how to look at data to discover what it contains, how to capture those ideas in conceptual models, and then feed your understanding back into the organization through business plans, metrics, dashboards, and other applications. Along the way, you'll experiment with concepts through hands-on workshops at the end of each chapter. Above all, you'll learn how to think about the results you want to achieve rather than rely on tools to think for you. Use graphics to describe data with one, two, or dozens of variables. Develop conceptual models using back-of-the-envelope calculations as well as scaling and probability arguments. Mine data with computationally intensive methods such as simulation and clustering. Make your conclusions understandable through reports, dashboards, and other metrics programs. Understand financial calculations including the time value of money. Use dimensionality reduction techniques or predictive analytics to conquer challenging data analysis situations. Become familiar with different open source programming environments for data analysis. Finally, a concise reference for understanding how to conquer piles of data.

This book constitutes the refereed post-proceedings of the Second International Conference on Theoretical and Mathematical Foundations of Computer Science (ICTMF 2011) held in Singapore in May 2011. The conference was held together with the Second International Conference on High Performance Networking, Computing, and Communication Systems (ICHCC 2011) which proceedings are published in CCIS 163. The 84 revised selected papers presented were carefully reviewed and selected for inclusion in the book. The topics covered range from computational science, engineering, and technology to digital signal processing and computational biology to game theory and other related topics.

[HHAI 2023: Augmenting Human Intellect](#) Paul Lukowicz, Sven Mayer, Janin Koch, John Shawe-Taylor, 2023-07-15. Artificial intelligence (AI) has been much in the news recently, with some commentators expressing concern that AI might eventually replace humans. But many developments in AI are designed to enhance and supplement the performance of humans rather than replace them, and a novel field of study with new approaches and solutions to the development of AI has arisen to focus on this aspect of the technology. This book presents the proceedings of HHAI2023, the 2nd International Conference on Hybrid Human Artificial Intelligence, held from 26-30 June 2023 in Munich, Germany. The HHAI international conference series is focused on the study of artificially intelligent systems that cooperate synergistically, proactively, responsibly, and purposefully with humans, amplifying rather than replacing human intelligence, and invites contributions from various fields, including AI, human-computer interaction, the cognitive and social sciences, computer science, philosophy, among others. A total of 78 submissions were received for the main conference track, and most papers were reviewed by at least three reviewers. The overall final acceptance rate was 43% with

14 contributions accepted as full papers 14 as working papers and 6 as extended abstracts The papers presented here cover topics including interactive hybrid agents hybrid intelligence for decision support hybrid intelligence for health and values such as fairness and trust in hybrid intelligence We further accepted 17 posters and 4 demos as well as 8 students to the first HHAI doctoral consortium this year The authors of 4 working papers and 2 doctoral consortium submissions opted for not publishing their submissions to allow a later full submission resulting in a total of 57 papers included in this proceedings Addressing all aspects of AI systems that assist humans and emphasizing the need for adaptive collaborative responsible interactive and human centered artificial intelligence systems which can leverage human strengths and compensate for human weaknesses while considering social ethical and legal considerations the book will be of interest to all those working in the field

The Art of Insight in Science and Engineering Sanjoy Mahajan, 2014-11-07 Tools to make hard problems easier to solve In this book Sanjoy Mahajan shows us that the way to master complexity is through insight rather than precision

Precision can overwhelm us with information whereas insight connects seemingly disparate pieces of information into a simple picture Unlike computers humans depend on insight Based on the author s fifteen years of teaching at MIT Cambridge University and Olin College *The Art of Insight in Science and Engineering* shows us how to build insight and find understanding giving readers tools to help them solve any problem in science and engineering To master complexity we can organize it or discard it *The Art of Insight in Science and Engineering* first teaches the tools for organizing complexity then distinguishes the two paths for discarding complexity with and without loss of information Questions and problems throughout the text help readers master and apply these groups of tools Armed with this three part toolchest and without complicated mathematics readers can estimate the flight range of birds and planes and the strength of chemical bonds understand the physics of pianos and xylophones and explain why skies are blue and sunsets are red *The Art of Insight in Science and Engineering* will appear in print and online under a Creative Commons Noncommercial Share Alike license
