Grant Watson an English field naturalist zoologist and one of England's best loved nature writers spent a lifetime trying to bring nature and consciousness into a unified holistic vision that would establish meaning in the world without losing wonder The questions raised by facts of nature inexplicable in terms of conventional theories together with insights gained from a reading of Jung as well as by a study of early Christian gnostic literature and the anthroposophy of Rudolf Steiner brought him to an imaginative perception of living things based on the conviction of the presence in all things of a spiritual reality Love is of man but wisdom is of nature and there are times when it almost seems that the author's secret as perhaps it will one day be the secret of a reformed scientific method is to stand aside and let the wisdom of nature herself speak through him Owen Barfield **What Good Are Bugs? This work presents a connected account of western European thought from the Patristic age to the mid fourteenth century Dales aims to keep his reader close to the sense of the texts which he translates frequently at some length or summarizes in his exposition He attempts to include important matters which are generally omitted in broad treatments the chapter on the tenth century is the longest in the book but the author s choice of topics is fully justified by his special intimacy with what he elects to discuss particularly the hexameral tradition ancient and medieval the scientific tradition twelfth century treatises on nature and cosmology discussions of the eternity of the world and the thought of Robert Grosseteste This adds a personal

and distinctive character to the word Dales stresses throughout the diversity and vigor of medieval thought qualities which he illustrates widely from Latin and vernacular poetry and literature of various kinds as well as from philosophical and theological texts The Intellectual Life of Western Europe in the Middle Ages Richard C.
