How Pi Can Save Your Life Chris Waring,2021-08-31 Math to the rescue Discover equations for all sorts of real world situations in this fun guide to surviving an unpredictable world Learn how to survive absurd yet statistically possible scenarios using the all encompassing power of mathematical equations Whether you paid much attention in math class or not the inescapable truth is that life is full of equations You use differentiation when driving from point A to B and apply basic geometry when you re crossing the road between traffic even if you don t realize it But what if you were plummeting to your death in a plane with no engine and needed to know what size parachute to make from your cabinmate s sari in order to survive Math teacher Chris Waring tackles some frankly ridiculous scenarios with essential bulletproof equations so you can learn to Communicate with an alien civilization Save your town from a zombie apocalypse Contain a major oil spill Excavate a fossil that could be a major scientific discovery Pilot a space shuttle back to earth Guard a priceless painting in the Louvre Perform Hollywood stunts in a blockbuster action film and more Praise for Chris Waring Exploring the mysteries of math has never been so much fun Lancashire Evening Post Genomics - easy as Pi Uki D. Lucas,2016-04-09 This book has been inspired by recent convergence of two sciences both of which are my life long passions both of which for the first time this year are becoming affordable to a an average person genomics and cluster computers The field of genomics has exploded in last few years beyond belief the original human genome sequencing project finished in year 2000 took 13 years and 3 billion to complete Today the cost of sequencing of the whole genome is approaching 800 in bulk and can be done in couple of hours The genome research has been concentrated around the prestigious institutions with generous grants that could afford access to newest sequencing technology The positive outcome of the research sponsored by the public funds is that the results are also public and anyone can have access to genetic sequence information from the Web base databases and FTP sites With a quick search you can get sequences of many organisms ranging from common bacteria yeast corn wheat fruit flies mouse rats extinct mammals monkeys apes Neanderthal and many humans Sequencing the next genome take hours now and there are thousands of them sequenced now as you read it For couple of hundreds of dollars you can determine presence

of some interesting sequences using companies like 23andMe best of all you can download the raw data of your test and start comparing it against other genomes or databases of genes immediately At the same time the medical field is learning about hundreds of thousands on proteins and trying to figure out which genetic sequences code for them Doctors are discovering the genetic association of many diseases and individual drug interactions Each human genome is composed of 3.3 billion letters base pairs comparing it against multiple other genomes requires some serious processing power There are other organisms such as loblolly pine *Pinus taeda* that have 23 billion base pairs in their DNA that is 7 time more than human Due to the sheer amount of the data being generated every day there is a vast opportunity for new software tools and new applications of that knowledge The field of genomics is growing faster than any other technological advance in human history and few would argue that with potentially the biggest impact on our future lives since we learned how to use fire
