**The History of Life on Earth** Nathan Keighley, 2018-08 Evolution is one of the most fundamental principles that governs life Its actions may be subtle but they can be observed every day such as predators hunting prey or plant successions in competing for empty space These habituations were envisaged by Charles Darwin to be the properties of nature that lead to evolution and prompted the conceptualisation of the theory of natural selection The force of this process can be most dramatically depicted by looking at the variation of organisms throughout the history of life on Earth

**A New History of Life** Peter Ward, Joe Kirschvink, 2015-01-01 Charles Darwin's theories first published more than 150 years ago still set the paradigm of how we understand the evolution of life but scientific advances of recent decades have radically altered that Now two pioneering scientists draw on their years of experience in paleontology biology chemistry and astrobiology to deliver an eye opening narrative using a generation's worth of insights culled from new research Writing with zest humor and clarity Ward and Kirschvink show that many of our long held beliefs about the history of life are wrong Three central themes emerge First Ward and Kirschvink argue that catastrophe shaped life's history more than all other forces combined from notorious events like the sudden extinction of dinosaurs to the recently discovered Snowball Earth and the Great Oxygenation Event Second life consists of carbon but oxygen carbon dioxide and hydrogen sulfide determined how it evolved Third ever since Darwin we have thought of evolution in terms of species Yet it is the evolution of ecosystems from deep ocean vents to rainforests that has formed the living world as we know it Ward and Kirschvink tell a story of life on Earth that is at once fabulous and familiar And in a provocative coda they assemble discoveries from the latest cutting edge research to imagine how the history of life might unfold deep into the future
