Guidelines For Cave And Karst Protection:

Guidelines for Cave and Karst Protection John Watson, 1997 Cave and karst landforms are distributed widely around the world They have many values and are an integral component of the world s biodiversity Some are habitats for a wide range of endemic species of flora and fauna while others house rare and endangered species Still others are the sources of rare minerals and some are important for resources such as groundwater while some are venerated as sites of religious spiritual and cultural importance Many such landforms encompass one or many of these values As special places cave and karst landforms require special management This small booklet has been prepared as a brief guide for planners managers and users of cave and karst estates and provides general information and practical guidelines for the management of cave and karst ecosystems

Guidelines for Cave and Karst Protection Second Edition David Gillieson, John Gunn, Augusto Auler, Terry Bolger, 2022-04 *Recommendations and Guidelines for Managing Caves on Protected Lands* William Jones, Horton Hobbs III, Carol Wicks, Robert Currie, Louise Hose, Ronald Kerbo, James Goodbar, Jerry Trout, 2003-06-01 This manual was prepared to provide guidance for managers of protected lands that fall under the Federal Cave Resources Protection Act of 1988 Pref

Encyclopedia of Caves and Karst Science John Gunn, 2004-08-02 The Encyclopedia of Caves and Karst Science contains 350 alphabetically arranged entries The topics include cave and karst geoscience cave archaeology and human use of caves art in caves hydrology and groundwater cave and karst history and conservation and management The Encyclopedia is extensively illustrated with photographs maps diagrams and tables and has thematic content lists and a comprehensive index to facilitate searching and browsing

Protected Area Governance and Management Graeme L. Worboys, Michael Lockwood, Ashish Kothari, Sue Feary, Ian Pulsford, 2015-04-08 Protected Area Governance and Management presents a compendium of original text case studies and examples from across the world by drawing on the literature and on the knowledge and experience of those involved in protected areas The book synthesises current knowledge and cutting edge thinking from the diverse branches of practice and learning relevant to protected area governance and management It is intended as an investment in the skills and competencies of people and consequently the effective governance and management of protected areas for which they are responsible now and into the future The global success of the protected area concept lies in its shared vision to protect natural and cultural heritage for the long term and organisations such as International Union for the Conservation of Nature are a unifying force in this regard Nonetheless protected areas are a socio political phenomenon and the ways that nations understand govern and manage them is always open to contest and debate The book aims to enlighten educate and above all to challenge readers to think deeply about protected areas their future and their past as well as their present The book has been compiled by 169 authors and deals with all aspects of protected area governance and management It provides information to support capacity development training of protected area field officers managers in charge and executive level managers

Caves David Shaw

Gillieson,2021-06-09 People have been interested in caves for a very long time Our distant ancestors used them for shelter as sources of water and as places in which to conduct essential rituals They adorned their walls with quite sophisticated artwork depicting both their existential and spiritual concerns Caves feature in our mythology they are used as places of worship in many cultures and they are used throughout the world as places in which to store prized foodstuffs and wine For at least two hundred years they have attracted scientists artists photographers and recreational cavers This book aims examines how caves form the light they shed on past environments and climates and the values both environmental and cultural that they provide to humanity This second edition of Caves Processes Development and Management is a welcome revision of the author s earlier treatment released over twenty years ago It has been updated significantly expanded and largely rewritten The intervening years have seen a dramatic increase in karst and cave research globally with significant advances in our understanding of fundamental processes in our ability to extract proxy climatic and environmental data from cave deposits and in our understanding of the breadth of cave values and as a result the complexity of their management needs This new edition adopts a broad international perspective in the research examples used and the cited literature and has actively sought out material from the tropical world and the southern continents thus avoiding the European and North American bias frequently found in speleological publications Caves Processes Development and Management Second Edition is organised into four sections In the first section contemporary processes of cave formation are examined The second section of the book deals with past processes and their physical manifestation In the third section the use of caves by various organisms from bacteria to humans is explored The final section of the book reviews our changing approaches to cave management and to catchment management on karst terrains The book will be of use to anyone who is interested in caves and karst or who wants to understand about cave formation development values and management **Geotourism** Ross Kingston Dowling,David Newsome,2006 Geotourism is tourism surrounding geological attractions and destinations This unique text uses a wealth of case studies to discuss the issues involved in the management and care of such attractions covering topics such as sustainability impacts and environmental issues Geotourism Sustainability impacts and management leads the reader logically through the process covering both the theories involved and the practicalities of managing such environmentally precious attractions The biology of hypogean fishes Aldemaro Romero,2013-06-29 Hypogean cave artesian fishes have fascinated researchers even before they were described in the scientific literature in 1842 Since then a number of scientists have used them to justify their own evolutionary ideas from neo Lamarckism to neo Darwinism from neutral evolution to selectionist approaches Research in recent years has shown that these fishes are much more complex in their adaptations to the subterranean environment than previously believed there are those with features expected from living in total darkness complete blindness and depigmentation and poor in nutrients extremely low metabolic rates others differ very little if any from their epigeal surface ancestors in their morphology and physiology but not so in their behavior

Some of them even live in nutrient rich environments. Actually one of the most overlooked facets of these animals is that there are more species of hypogean fishes without troglomorphisms (blindness, depigmentation) than with troglomorphic ones. The study of these apparently unadapted fishes is providing new insights into our understanding of the evolution of phenotypic characters founding effect, behavioral and physiological adaptations. The 86 species of troglomorphic fishes described so far belong to 18 different families, many of which would hardly fit the notion that they were preadapted to conquer the underground environment. Further, many troglomorphic species show very little genotypic differentiation when compared with their putative ancestors, indicating that massive phenotype changes can be achieved via little genetic reorganization, a reorganization that mostly affects regulatory genes. These and many other topics are discussed in this volume containing 29 papers written by 41 authors from 9 countries. Hopefully this volume will convince many other researchers that hypogean fishes represent a unique opportunity to study a concept in evolutionary biology that is only superficially understood: convergent evolution.

Karst Hydrogeology and Geomorphology Derek Ford, Paul D. Williams, 2013-05-03

Originally published in 1989, *Karst Geomorphology and Hydrology* became the leading textbook on karst studies. This new textbook has been substantially revised and updated. The first half of the book is a systematic presentation of the dissolution kinetics, chemical equilibria and physical flow laws relating to karst environments. It includes details of the many environmental factors that complicate their chemical evolution with a critique of measurement of karst erosion rates. The second half of the book looks at the classification system for cave systems and the influence of climate and climatic change on karst development. The book ends with chapters on karst water resource management and a look at the important issues of environmental management including environmental impact assessment, environmental rehabilitation, tourism impacts and conservation values. Practical application of karst studies are explained throughout the text. This new edition strengthens the book's position as the essential reference in the field. Karst geoscientists will not dare to stray beyond arm's reach of this volume. It is certain to remain the professional standard for many decades. *Journal of Cave and Karst Studies* August 2007

Volcano and Geothermal Tourism Patricia Erfurt-Cooper, Malcolm Cooper, 2010-08-12

There are over 1300 active volcanoes worldwide and many more dormant or extinct. Some are developed as tourist destinations, others are not but have great potential. Mount Fuji in Japan attracts over 100 million visitors per year and has immense cultural and spiritual significance, while a number of volcanic areas in national parks, for example Teide in Spain, Yellowstone in the US, Vesuvius in Italy and Tongariro in New Zealand, attract between one to four million tourists each year. In the last decade the designation of nearly 50 geoparks around the world has highlighted their potential for tourism development. This book provides the first global review and assessment of the sustainable use of active and dormant volcanic and geothermal environments for geotourism. The volcano-based tourism sector is further augmented through a closely linked range of geothermal resources and attractions such as geysers and hot springs which are discussed in detail throughout individual

chapters covering all key volcanic and geothermal regions around the world It is shown that volcano and geothermal tourism is a subsection of nature based geotourism and incorporates a variety of other tourism categories such as adventure tourism extreme tourism ecotourism green tourism educational tourism and hot spring tourism This comprehensive book covers the most important issues of this growing tourism sector whilst incorporating relevant global research making it an essential resource for all in the field Includes colour plates *Tongass National Forest (N.F.), Central Prince of Wales, Ketchikan Pulp Company Long-term Timber Sale Contract* ,1993 *Tongass National Forest Annual Monitoring and Evaluation Report, Fiscal Year ...* United States.
