National Center for Environmental Health. Division of Environmental Hazards and Health Effects. Radiation Studies Branch, 2008* **Medical Response to Terror Threats**

Aaron Richman, Shmuel C. Shapira, Yair Sharan, 2010 We do not automatically associate the practice of medicine with al Qaeda or weapons of mass destruction yet medical practitioners increasingly play their part in the war against terrorism Called to risk their own lives in order to help others they are always among those first responders who must overcome their natural instinct to get away and instead rush to the scene of any fresh terror attack to offer what aid they can to the victims The successful medical response to terror threats requires regular training and accurate information This book is one product of the NATO workshop Terror Medicine held in Jerusalem in 2008 The twelve chapters were written by the subject matter experts who led this workshop and topics covered include assessment of medical threats in various types of terrorist attack the special medical threat of suicide bombings the unique epidemiology of terrorist attacks management of terror related mass casualty events MCE analysis of case studies and best practices as well as lessons learned and standard operating protocol SOP expertise Reflecting multiple lifetimes worth of experience and research and providing expert analysis to the professionals who must respond to the hazards threats and injuries caused by terrorism this book is an important addition to the resources of those who continue to fight global terrorism with their medical skills as well as being of interest to all who support them in that fight **Koenig and Schultz's Disaster Medicine** Kristi L. Koenig, Carl H.

Schultz, 2009-09-30 As societies become more complex and interconnected the global risk for catastrophic disasters is increasing Demand for expertise to mitigate the human suffering and damage these events cause is also high A new field of disaster medicine is emerging offering innovative approaches to optimize disaster management Much of the information needed to create the foundation for this growing specialty is not objectively described or is scattered among multiple different sources Now for the first time a coherent and comprehensive collection of scientific observations and evidence based recommendations with expert contributors from around the globe is available in Koenig and Schultz's Disaster Medicine Comprehensive Principles and Practices This definitive work on disaster medicine identifies essential subject matter clarifies nomenclature and outlines necessary areas of proficiency for healthcare professionals handling mass casualty crises It also describes in depth strategies for the rapid diagnosis and treatment of victims suffering from blast injuries or exposure to chemical biological and radiological agents **Radiological and Nuclear Terrorism** P. Andrew

Karam, 2021-03-10 This book discusses multiple aspects of radiological and nuclear terrorism Do you know what to do if there is a radiological or nuclear emergency in your city These accidents are not common but they have happened and even though we have not seen an attack using these weapons governments around the world are making plans for how to prevent them

and for how to respond if necessary Whether you are an emergency responder a medical caregiver a public health official even a member of the public wanting to know how to keep yourself and your loved ones safe there is a need to understand how these weapons work how radiation affects our health how to stop an attack from taking place how to respond appropriately in the event of an emergency and much more Unfortunately the knowledge that is needed to accomplish all of this is lacking at all levels of society and government In this book Dr Andrew Karam an internationally respected expert in radiation safety and multiple aspects of radiological and nuclear emergencies discusses how these weapons work and what they can do how they can affect our health how to keep yourself safe and how to react appropriately whether you are a police officer investigating a suspect radiological weapon a firefighter responding to a radiological or nuclear attack a nurse or physician caring for potentially contaminated patients or a governmental official trying to keep the public safe To do this he draws upon his extensive experience in the military the several years he worked directly with emergency responders his service on a number of advisory committees and multiple trips overseas in the aftermath of the Fukushima accident and on behalf of the International Atomic Energy Agency Interpol and the Health Physics Society
