Guinea Pig Zero An Anthology Of The Journal For Human Research Subjects:

Guinea Pig Zero Robert Helms, 2005-02-08 From first person accounts of pharmaceutical studies gone bad to intricate medical histories Guinea Pig Zero provides a fascinating look at the people who sell their bodies to science While the book provides advice to present day research subjects by rating research clinics the book also provides context by investigating the history and ethics behind this important but little known medical industry

Silent Partners Rebecca Dresser, 2017 The research ethics system was created without the help of people who know what it is like to be a research subject This is a serious omission Experts have overlooked ethical issues that matter to subjects Silent Partners moves subjects to the forefront giving them a voice in research ethics

Human Subjects Research Regulation I. Glenn Cohen, Holly Fernandez Lynch, 2014-07-11 The current framework for the regulation of human subjects research emerged largely in reaction to the horrors of Nazi human experiment revealed at the Nuremburg trials and the Tuskegee syphilis study conducted by US government researchers from 1932 to 1972 This framework combining elements of paternalism with efforts to preserve individual autonomy has remained fundamentally unchanged for decades Yet as this book documents it has significant flaws including its potential to burden important research overprotect some subjects and inadequately protect others generate inconsistent results and lag behind developments in how research is conducted Invigorated by the US government's first steps toward change in over twenty years Human Subjects Research Regulation brings together the leading thinkers this field from ethics law medicine and public policy to discuss how to make the system better The result is a collection of novel ideas some incremental some radical for the future of research oversight and human subject protection After reviewing the history of US research regulations the contributors consider such topics as risk based regulation research involving vulnerable populations including military personnel children and prisoners the relationships among subjects investigators sponsors and institutional review boards privacy especially regarding biospecimens and tissue banking and the possibility of fundamental paradigm shifts Book jacket

Bodies Out of Control Matthew Weinstein,2010 What is the cultural politics of science health and disease in the U S Bodies Out of Control explores this question through a series of case studies From its in depth examination of the discussions of sickle cell anemia schistosomiasis and cancer in middle school and high school textbooks to its analysis of the news coverage of the anthrax attacks of 2001 the book reveals the entanglements of science colonialism nationalism and identity The book also explores how the meaning of science itself is worked through in public discourses offering alternatively medical salvation confusion and a vision of a world without pleasure Finally to explore what agency and a critical practice of engaging science in classrooms and elsewhere might look like the book turns to the writings of politicized human research subjects which demonstrate a spectrum of possibilities for

more democratic engagements with science As a whole the book emphasizes the importance of engaging texts critically in science education and the ways that the cultural politics of science works through images of human and institutional bodies in and out of control Publisher's description **Chasing Medical Miracles** Alex O'Meara, 2010-06-03 Provides a behind the scenes look at clinical trials and how the companies involved with them have become significant part of the American medical establishment **Law and Ethics in Biomedical Research** Duff William Ramus Waring, Trudo

Lemmens, 2006-01-01 When a young man named Jesse Gelsinger died in 1999 as a result of his participation in a gene transfer research study regulatory agencies in the United States began to take a closer look at what was happening in medical research The resulting temporary shutdown of some of the most prestigious academic research centres confirmed what various recent reports in the United States as well as Canada had claimed that the current system of regulatory oversight was in need of improvement Law and Ethics in Biomedical Research uses the Gelsinger case as a touchstone illustrating how three major aspects of that case the flaws in the regulatory system conflicts of interest and legal liability embody the major challenges in the current medical research environment Editors Trudo Lemmens and Duff R Waring along with a host of top scholars in the field demonstrate why existing models of research review and human subject protection are in need of improvement and how more stringent regulatory and legal means can be used to strengthen the protection of research subjects and the integrity of research The contributors also address conflicts of interest paying particular attention to the growing commercialization of medical research as well as the legal liability of scientific investigators research institutions and governmental agencies Legal liability is a growing concern in medical research and this fascinating study is in the international context one of the first to explore the liability of various parties involved in the research enterprise

Bad Pharma Ben Goldacre, 2013-02-05 We like to imagine that medicine is based on evidence and the results of fair testing and clinical trials In reality those tests and trials are often profoundly flawed We like to imagine that doctors who write prescriptions for everything from antidepressants to cancer drugs to heart medication are familiar with the research literature about a drug when in reality much of the research is hidden from them by drug companies We like to imagine that doctors are impartially educated when in reality much of their education is funded by the pharmaceutical industry We like to imagine that regulators have some code of ethics and let only effective drugs onto the market when in reality they approve useless drugs with data on side effects casually withheld from doctors and patients All these problems have been shielded from public scrutiny because they're too complex to capture in a sound bite But Ben Goldacre shows that the true scale of this murderous disaster fully reveals itself only when the details are untangled He believes we should all be able to understand precisely how data manipulation works and how research misconduct in the medical industry affects us on a global scale With Goldacre's characteristic flair and a forensic attention to detail Bad Pharma reveals a shockingly broken system and calls for regulation This is the pharmaceutical industry as it has never been seen before **Principles of**

White Coat, Black Hat Carl Elliott, 2011-09-13 By New Yorker and Atlantic writer Carl Elliott a readable and even funny account of the serious business of medicine A tongue in cheek account of the changes that have transformed medicine into big business Physician and medical ethicist Carl Elliott tracks the new world of commercialized medicine from start to finish introducing the professional guinea pigs ghostwriters thought leaders drug reps public relations pros and even medical ethicists who use medicine for sometimes huge financial gain Along the way he uncovers the cost to patients lost in a health care universe centered around consumerism

Medical Proofs, Social Experiments Catherine Will, Tiago Moreira, 2016-04-22 Clinical trials have become key technologies for decision making in the contemporary world Their results shape medical practice and determine priorities across health care systems but the work that goes into producing credible data is often hidden *Medical Proofs Social Experiments* draws upon detailed case studies to argue that to understand their value we need to pay more attention to the contexts for these modern medical experiments recovering the diverse ways in which they involve doctors patients and the public the local practices that contribute to their completion and the complex negotiation of their results in professional and statutory institutions Presenting research from the UK USA Sweden and The

Netherlands the ethnographic perspective adopted by the authors provides a space to explore the investments of different state market professional and other actors in particular forms of evaluation and the ways in which trial methodologies may be re designed or re imagined to satisfy social and political expectations As such this volume will be of interest to those working in the fields of science and technology studies the sociology and anthropology of medicine and researchers of policy and organisation in health care
