CHAPTER 2

SOLUTIONS TO PROBLEMS

2.1 (i) Income, age, and family background (such as number of siblings) are just a few possibilities. It seems that each of these could be correlated with years of education. (Income and education are probably positively correlated; age and education may be negatively correlated because women in more recent cohorts have, on average, more education; and number of siblings and education are probably negatively correlated.)

(ii) Not if the factors we listed in part (i) are correlated with educ. Because we would like to hold these factors fixed, they are part of the error term. But if u is correlated with educ, then E(uleduc) ≠ 0, and so SLR.4 fails.

2.3 (i) Let $y_i = GPA_i$, $x_i = ACT_i$, and n = 8. Then $\overline{x} = 25.875$, $\overline{y} = 3.2125$, $\hat{\overline{z}}(x_i - \overline{x})(y_i - \overline{y}) =$

5.8125, and $\sum_{i=1}^{n} (x_i - \overline{x}_i)^2 = 56.875$. From equation (2.19), we obtain the slope as $\hat{\beta}_i =$

 $5.8125/56.875 \approx .1022$, rounded to four places after the decimal. From (2.17), $\hat{\xi}_0 = \overline{y} - \hat{\beta}_1 \overline{x} \approx 3.2125 - (.1022)25.875 \approx .5681$. So we can write

$$GPA = .5681 + .1022 ACT$$

m = 8.

The intercept does not have a useful interpretation because ACT is not close to zero for the population of interest. If ACT is 5 points higher, GPA increases by .1022(5) = .511.

(ii) The fitted values and residuals — rounded to four decimal places — are given along with the observation number i and GPA in the following table:

Wooldridge, Mokhtarul Wadud, Jenny Lye, 2016-10-24 Econometrics is the combined study of economics and statistics and is an applied unit It is increasingly becoming a core element in finance degrees at upper levels This first local adaptation of Wooldridge's text offers a version of Introductory Econometrics with a structural redesign that will better suit the market along with Asia Pacific examples and data Two new chapters at the start of the book have been developed from material originally in Wooldridge's appendix section to serve as a clear introduction to the subject and as a revision tool that bridges students transition from basic statistics into econometrics This adaptation includes data sets from Australian and New Zealand as well as from the Asia Pacific region to suit the significant portion of finance students who are from Asia and the likelihood that many graduates will find employment overseas Econometrics, 2nd Rev. Ed Badi Hani Baltagi, 1998 This reference introduces the basic econometric methods and the underlying assumptions behind them It also includes a simple and concise treatment of more advanced topics in time series spatial correlation limited dependent variables and panel data models as well as specification testing Gauss Newton regressions and regression diagnostics. The strengths of this book lie in presenting difficult material in a simple yet rigorous manner In addition the book features a set of empirical illustrations that demonstrate some of the basic results The empirical exercises are solved using several econometric software packages

In each case special emphasis is placed on applications and models in economics. The chapter on linear algebra deals with matrices vectors determinants and systems of linear equations. This is followed by the representation of structures and algorithms of linear programming. Finally the reader finds formulas on descriptive statistics data analysis ratios inventory and time series analysis on probability theory events probabilities random variables and distributions and on inductive statistics point and interval estimates tests.
