*Psychodynamic Psychotherapy Research: Evidence Based Practice and Practice Based Evidence* continues the important work of the first book published in 2009 by Humana Press, *Handbook of Evidence Based Psychodynamic Psychotherapy: Bridging the Gap Between Science and Practice*. This landmark title presents in one volume significant developments in research including neuroscience research in psychodynamic psychotherapy by a team of renowned clinician researchers. The demand for ongoing research initiatives in psychodynamic psychotherapy from both internal and external sources has increased markedly in recent years, and this volume continues to demonstrate the efficacy and effectiveness of a psychodynamic approach to psychotherapeutic interventions in the treatment of psychological problems. The work in this volume is presented in the spirit of ongoing discussion between researchers and clinicians about the value of specific approaches to specific patients with specific psychiatric and psychological problems. Multiple forms of treatment interventions have been developed over the past fifty years, and this volume makes clear with firm evidence the authors' support for the current emphasis on personalized medicine. Groundbreaking and a major contribution to the psychiatric and psychological literature, *Psychodynamic Psychotherapy Research: Evidence Based Practice and Practice Based Evidence* provides firm grounding for advancing psychodynamic psychotherapy as a treatment paradigm.

**Collaborative / Therapeutic Assessment** Stephen E. Finn, Constance T. Fischer, Leonard Handler, 2012-01-31 A guide to conducting Collaborative Therapeutic Assessment to promote client growth. Mental health professionals are increasingly enthusiastic about and ready to use psychological test data, research, and theory in life-relevant ways to improve diagnosis, client care, and treatment outcomes. With Collaborative Therapeutic Assessment (CTA), clients participate actively with the assessor in exploring how their test scores and patterns reflect who they are in their daily lives and how they can learn to help themselves cope with life's challenges. Using a case study approach to demonstrate how to apply CTA in practice, Collaborative Therapeutic Assessment provides practitioners with a variety of flexible and adaptable case examples featuring adults, children, adolescents, couples, and families from different backgrounds in need of treatment for assorted concerns. Designed for both experienced and novice clinicians, the book begins with a brief history of CTA and provides clear definitions of the distinctions among many common approaches. It uniquely presents eighteen diverse CTA assessments covering depression, multiple suicide attempts, severe abuse, dissociation, an adolescent psychiatric ward custody evaluation, a couple in crisis, and collaborative neuropsychology. Guidance on how both client and clinician can agree on the best course of action through joint exploration of assessment procedures, results, and implications.
