

## Worksheet - Magnetic Fields

1. You are experimenting with two identical permanent magnets. One magnet is coloured blue, and the other is coloured red. If the blue magnet attracts the red magnet with the force of 75.0 N, what is the force of attraction between the red and the blue magnet?
2. If four compasses are arranged around a magnet as shown in the diagram below, in what direction will the north end of each compass needle point? Draw the needles in the diagram.

3. What will happen to the suspended magnet as a second magnet is brought close?

4. Draw the direction the compass needle will point when the compass is placed on the current-carrying conductor in each diagram below.

5. Draw the direction of the magnetic field inside the loops and outside the loops in the figure below.

6. A 25.0 cm solenoid has 1800 loops and a diameter of 3.00 cm. Calculate the magnetic field in the air core of the solenoid when a current of 1.25 A is flowing.

numerous seemingly diverse and widespread fields of science and engineering In connection with this great importance is  
attached to the publication of results that focus on recent and novel developments in the theory of any types of differential

Significant advances have been made in fusion science and a point has been reached when we need to decide if the United  
States is ready to begin a burning plasma experiment A burning plasma in which at least 50 percent of the energy to drive  
the fusion reaction is generated internally is an essential step to reach the goal of fusion power generation The Burning

Plasma Assessment Committee was formed to provide advice on this decision The committee concluded that there is high confidence in the readiness to proceed with the burning plasma step The International Thermonuclear Experimental Reactor ITER with the United States as a significant partner was the best choice Once a commitment to ITER is made fulfilling it should become the highest priority of the U S fusion research program A funding trajectory is required that both captures the benefits of joining ITER and retains a strong scientific focus on the long range goals of the program Addition of the ITER project will require that the content scope and level of U S fusion activity be defined by program balancing through a priority setting process initiated by the Office of Fusion Energy Science

200 Science Investigations for Young Students Martin Wenham, 2000-12-13 This book enables teachers to develop a complete range of basic investigations for science with students aged five to 11 years It demonstrates how children can use hands on activities to consolidate and extend their knowledge and understanding Investigations are presented in a generic form so that teachers can work through them and adapt them to meet the particular needs of their own classes The presentation of activities ranges from highly structured sequences of instructions and questions with answers to more general discussions depending on the approach needed and the likely variations in equipment and materials available Each activity is aimed to help any teacher carry out significant scientific investigations with their class and where necessary to learn alongside them Almost every investigation and activity has been tested by the author Investigations use readily available non specialist or recycled materials The context of this book is children s need to learn through first hand experience of the world around them This book is an essential resource for teachers planning an effective science programme or for student teachers needing to broaden their scientific knowledge and understanding 200 Science Investigations for Young Students is the companion volume of activities which demonstrate the theories in Martin Wenham s Understanding Primary Science The content has been guided by but not limited to The National Curriculum 2000 and the Initial Teacher Training Curriculum for Primary Science issued by the Teacher Training Agency

Alqahtani,Zeeshan,Waris Khan,Florentin Smarandache,Nidhal Becheikh,Roobaea Alroobaea, Taseer Muhammad,2024-01-01 The inclusion of nanoparticles has the potential to improve the thermal efficiency of the base fluid The field of nanofluid NF dynamics has attracted important attention due to its extensive range of practical uses like fuel cells solar energy medication administration heat transfer microfabrication coolant applications and other related domains The aim of this study is to scrutinize the impact of Lorentz force thermal energy joule heating heat source and injection parameters and Brownian and thermoporetic diffusions on the hybrid nanofluid over the moving wedge The stability inquiry is reported for the existing work in order to confirm the stable solutions that make the study unique Novelty of the existing work is to investigate the hybrid nanofluid flow and its stability The nanoparticles MoS<sub>2</sub> and Ag are suspended in ethylene glycol and water used as host fluids The numerical solution is

obtained from the dimensionless first order differential equations which are achieved from the basic flow phenomena through similarity alteration variables The influence of emerging factors on flow phenomena is reported via graphs The positive eigenvalues report stable solutions while the negative eigenvalues designate unstable solutions It is perceived that due to Lorentz force the rate of the fluid declines while the temperature inside the flow channel enhances The velocity profile decreases while the temperature and concentration increase with increasing quantities of permeable factors Similarly the Forchheimer number causes to enhance the flow rate and decrease the heat and concentration outlines The current analysis is validated by the published work
