**Being and Becoming in the Classroom** Wolff-Mich Roth, 2002-05-30 Highlights the current chasm between teacher education theories/praxeologies and the actual experience of teaching/praxis. Many traditional teacher education programs emphasize teaching based on reflection and deliberation yet when a new teacher is in a unique situation there is not always time to step back and look at it objectively. Through Roth's extensive experience as a teacher he has learned that a teacher must live in the heat of the moment but also develop room to maneuver in the moment. These skills come only by actually being in the classroom working at the elbow of experienced teachers and discussing the events of the day with other teachers. Roth develops his theory by introducing the previously ignored element of temporality in teaching. When there is no time out for reflection a teacher must develop on the spot decision making skills. In part one he presents the ideas of being in the classroom with students and being with other teachers. Other concepts that emerge are habitus, perceptions and expectations that lead to action. Spielraum: room to maneuver in situations and relationality knowing how to act without reflection based on student/teacher rapport. In part two Roth asserts that when novice teachers coteach and engage in subsequent cogenerative dialoguing with seasoned professionals they are in the process of becoming in the classroom. Teachers college students majoring in education and professors will all benefit immensely from this book.

**Memory at Work in the Classroom: Strategies to Help Underachieving Students** Francis Bailey, Ken Pransky, 2014-03-04 Why do some students struggle to understand and retain information while other students don't? The answer may well lie in the memory system which is the root of all learning. In *Memory at Work in the Classroom*

Francis Bailey and Ken Pransky expertly guide you through the aspects of human memory most relevant to classroom teachers. Real classroom examples help to deepen your understanding of how memory systems play a central role in the learning process as well as how culture plays a sometimes surprising role in memory formation and use. The memory systems covered in the book are Working Memory the gateway to learning, Executive Function the cognitive skills children need to independently orchestrate their memory systems in service to learning, Semantic Memory the storehouse of a person's knowledge of the world including academic concepts and the part of the memory system most affected by culture, Episodic Memory rich multisensory personal memories of specific events, Autobiographical Memory one's sense of self tied directly to student motivation. Although the techniques described apply to all students, the authors concentrate on explaining the source of struggling students' academic challenges and provide effective strategies for helping students become better learners. Whether you're a new or a veteran teacher, this book will offer fresh insights into your students' learning difficulties and move you to explore classroom practices that align with the functioning of memory and the ways students learn. [Navigating the Pedagogical Space for Knowledge Building Classrooms](#) Seng Chee Tan, 2022-11-01. Showcasing the design and implementation of knowledge building pedagogy, this book for educators and education researchers illuminates this future-oriented instructional and learning approach. In this Knowledge Age, innovation and creative knowledge works are central to the progress of a society; increasing the productivity of knowledge workers remains the main priority of competitive societies. Consequently, developing knowledge building capacity among students becomes one main goal of education. Knowledge building aims to transform school education in a radical way by developing the culture of innovation and knowledge creation in classrooms from preschools to universities. Knowledge building pedagogy focuses on sustaining idea improvement among students who develop the collective cognitive responsibility to add value to the learning community. Developed since the 1990s, knowledge building is now a model of instruction researched and advanced with an international network of researchers, teachers, educators, engineers, and policymakers. Implementing the knowledge building approach requires educators to make decisions based on principles rather than following prescriptive procedures that characterized most instructional models. Tan highlights the key pedagogical principles and discusses the critical design considerations. He also identifies the emerging research directions and developmental works related to knowledge building. A must-read book for educators and education researchers who are interested in the design and implementation of knowledge building pedagogy.
