challenge literally everyone politicians wrestling with everything from cybercrime to online freedom generals protecting the nation from new forms of attack while planning new cyberwars business executives defending firms from once unimaginable threats and looking to make money off of them lawyers and ethicists building new frameworks for right and wrong Most of all cybersecurity issues affect us as individuals We face new questions in everything from our rights and responsibilities as citizens of both the online and real world to simply how to protect ourselves and our families from a new type of danger And yet there is perhaps no issue that has grown so important so quickly and that touches so many that remains so poorly understood In *Cybersecurity and CyberWar What Everyone Needs to Know* New York Times best selling author P W Singer and noted cyber expert Allan Friedman team up to provide the kind of easy to read yet deeply informative resource book that has been missing on this crucial issue of 21st century life Written in a lively accessible style filled with engaging stories and illustrative anecdotes the book is structured around the key question areas of cyberspace and its security how it all works why it all matters and what can we do Along the way they take readers on a tour of the important and entertaining issues and characters of cybersecurity from the Anonymous hacker group and the Stuxnet computer virus to the new cyber units of the Chinese and U S militaries *Cybersecurity and CyberWar What Everyone Needs to Know* is the definitive account on the subject for us all which comes not a moment too soon *What Everyone Needs to Know* is a registered trademark of Oxford University Press

Cyberdeterrence and Cyberwar Martin C. Libicki, 2009 The protection of cyberspace the information medium has become a vital national interest because of its importance both to the economy and to military power An attacker may tamper with networks to steal information for the money or to disrupt operations Future wars are likely to be carried out in part or perhaps entirely in cyberspace It might therefore seem obvious that maneuvering in cyberspace is like maneuvering in other media but nothing would be more misleading Cyberspace has its own laws for instance it is easy to hide identities and difficult to predict or even understand battle damage and attacks deplete themselves quickly Cyberwar is nothing so much as the manipulation of ambiguity The author explores these in detail and uses the results to address such issues as the pros and cons of counterattack the value of deterrence and vigilance and other actions the United States and the U S Air Force can take to protect itself in the face of deliberate cyberattack Publisher description
