

Investigating the Human Body

On-site student activities

Years 9, 10 & VCE

Student activity (and record) sheets have been developed with alternative themes for students to use as guides and focus material during their visit. There are four sets of materials for Years 3–4, Years 5–6, Years 7–8 and Years 9, 10 and VCE. Each of these sets of materials contains a range of themes with individual record sheets. The choice of themes will depend on the classroom focus, the curriculum requirements and individual student needs.

Teachers may choose a single theme or a combination of sheets from different themes for individual student, or for small groups of students to use. A larger selection of themes may be used by larger groups of students. The information collected on the student record sheets should be used as reference material for the follow-up Classroom Activities, or for further research of the subject back at school.

Alternatively, teachers may choose to develop their own student activities or have students develop their own questions to research during their visit to *The Human Body* exhibition.

Years 9, 10 & VCE on-site student activity sheets focus on the following themes:

- The human body: going inside
- Inside out: the human body
- Close-up: the microscopic world of cells
- The digestive system
- The circulatory system
- The immune system
- The musculoskeletal system
- The nervous system
- The hormonal system

Kafai, 2012-10-12 More than a decade has passed since the First International Conference of the Learning Sciences ICLS was held at Northwestern University in 1991. The conference has now become an established place for researchers to gather. The 2004 meeting is the first under the official sponsorship of the International Society of the Learning Sciences ISLS. The theme of this conference is Embracing Diversity in the Learning Sciences. As a field, the learning sciences have always drawn from a diverse set of disciplines to study learning in an array of settings. Psychology, cognitive science, anthropology, and artificial intelligence have all contributed to the development of methodologies to study learning in schools, museums, and organizations. As the field grows, however, it increasingly recognizes the challenges to studying and changing learning environments across levels in complex social systems. This demands attention to new kinds of diversity in who, what, and how we study, and to the issues raised to develop coherent accounts of how learning occurs. Ranging from schools to families and across all levels of formal schooling, from pre-school through higher education, this ideology can be supported in a multitude of social contexts. The papers in these conference proceedings respond to the call **Uncovering Student Ideas in Science: 25 new formative assessment probes** Page Keeley, Joyce Tugel, 2009. Wouldn't it be helpful to know what your students' ideas are about a science concept before launching into a new lesson or unit? *Uncovering Student Ideas in Science Volume 4* offers 25 more formative assessment probes to help reveal students' preconceptions of fundamental concepts in science, bringing the total to 100 probes for the popular series by author Page Keeley. Teachers of grades K-12 will find short probes with grade-band specifics that provide easy-to-follow suggestions for addressing students' ideas by promoting learning through conceptual change instruction. Volume 4 adds to the probes in physical life and Earth and space science with a new category called unifying principles. Also covered is a discussion on balancing formative assessment with summative assessment Medical Record George Frederick Shrady, Thomas Lathrop Stedman, 1920
