Investments Bodie Kane Marcus 10th Edition:

Investments Zvi Bodie, Alex Kane, Alan Marcus, 2010-09-17 Bodie Kane and Marcus Investments sets the standard for graduate MBA investments textbooks. It blends practical and theoretical coverage while maintaining an appropriate rigor and a clear writing style. Its unifying theme is that security markets are nearly efficient, meaning that most securities are priced appropriately given their risk and return attributes. The text places greater emphasis on asset allocation and offers a much broader and deeper treatment of futures, options, and other derivative security markets than most investment texts. It is also the only graduate Investments text to offer an online homework management system. McGraw Hill's Connect Finance.

Handbook Of Financial Econometrics, Mathematics, Statistics, And Machine Learning (In 4 Volumes) Cheng Few Lee, John C Lee, 2020-07-30 This four volume handbook covers important concepts and tools used in the fields of financial econometrics, mathematics, statistics, and machine learning. Econometric methods have been applied in asset pricing, corporate finance, international finance, options, and futures, risk management, and in stress testing for financial institutions. This handbook discusses a variety of econometric methods including single equation, multiple regression, simultaneous equation, regression, and panel data analysis, among others. It also covers statistical distributions such as the binomial and log normal distributions in light of their applications to portfolio theory and asset management, in addition to their use in research regarding options and futures contracts. In both theory and methodology, we need to rely upon mathematics, which includes linear algebra, geometry, differential equations, Stochastic differential equation, Ito calculus, optimization, constrained optimization, and others. These forms of mathematics have been used to derive the capital market line, security market line, capital asset pricing model, option pricing model, portfolio analysis, and others. In recent times, an increased importance has been given to computer technology in financial research. Different computer languages and programming techniques are important tools for empirical research in finance. Hence, simulation, machine learning, big data, and financial payments are explored in this handbook. Led by Distinguished Professor Cheng Few Lee from Rutgers University, this multi-volume work integrates theoretical, methodological, and practical issues based on his years of academic and industry experience.
