Ion Beam Treatment of Polymers Alexey Kondyurin, Marcela Bilek, 2014-09-25 Ion Beam Treatment of Polymers Second Edition presents the results of polymer investigations and technique development in the field of polymer modification by high energy ion beams It shows how to use ion beam equipment in the polymer industry as well as how to use it to produce new polymer materials The authors scientists and researchers active in the field provide analysis and data from their work and give an overview of related work by others The authors focus on wetting adhesion hardness chemical activity environmental stability biocompatibility new synthesis methods and space flight construction The technologies of material modification by a beam of high energy ions have wide applications in different fields from microelectronics to medicine Historically ion beam treatment of polymers had fewer applications due to high costs of ion beam equipment and low costs of polymer materials The modern development of new pulse sources with a high current density and wide ion beams increase the effectiveness of ion beam technology for polymers Collates data from many scientists working in polymer chemistry physics of ion beam implantation and in development and production of ion beam equipment Covers industrial and scientific applications of ion beam implanted polymers Integrates physical and chemical aspects of the processes in polymers treated by ion beams

Ion Beam Treatment of Polymers Alexey Kondyurin, Marcela Bilek, 2010-07-07 Polymer materials are used in different fields of industries from microelectronic to medicine Ion beam implantation is method of surface modification when surface properties must be significantly changed and bulk properties of material must be saved Ion Beam Treatment of Polymers contains results of polymer investigations and techniques development in the field of polymer modification by high energy ion beams This book is intended for specialists in polymer science who have interest to use an ion beam treatment for improvement of polymer properties for specialists in physics who search a new application of ion beam and plasma equipment and also for students who look for future fields of high technology Chapter 1 3 are devoted to overview of the basic processes at high energy ion penetration into solid target The historical aspects and main physical aspects are covered A basic equipment principles and main producers of equipment for ion beam treatment are considered Chapter 4 contains chemical transformations in polymers during and after high energy ion penetration The modern methods and results of experimental and theoretical investigation are described Chapters 5 10 are devoted to properties of polymers after ion beam treatment regimes of treatment available applications in particular increase of adhesion of polymers and a mechanism of an adhesion increase wetting angle of polymer by water and its stability adhesion of cells on polymer surface drug release regulation from polymer coating and others Chapter 11 contains our last results on polymerisation processes in liquid oligomer composition under high vacuum plasma and ion beam conditions as simulation of free space environment By scientists working in polymer chemistry physics of ion beam implantation and in development and production of ion beam equipment Covering industrial and scientific applications of ion beam implanted polymers Also for students with an interest
