Natural Gas Vaclav Smil, 2015-09-21 Natural gas is the world's cleanest fossil fuel it generates less air pollution and releases less CO2 per unit of useful energy than liquid fuels or coals With its vast supplies of conventional

resources and nonconventional stores the extension of long distance gas pipelines and the recent expansion of liquefied natural gas trade a truly global market has been created for this clean fuel Natural Gas Fuel for the 21st Century discusses the place and prospects of natural gas in modern high energy societies Vaclav Smil presents a systematic survey of the qualities origins extraction processing and transportation of natural gas followed by a detailed appraisal of its many preferred traditional and potential uses and the recent emergence of the fuel as a globally traded commodity The unfolding diversification of sources particularly hydraulic fracturing and the role of natural gas in national and global energy transitions are described The book concludes with a discussion on the advantages risks benefits and costs of natural gas as a leading if not dominant fuel of the 21st century This interdisciplinary text will be of interest to a wide readership concerned with global energy affairs including professionals and academics in energy and environmental science policy makers consultants and advisors with an interest in the rapidly changing global energy industry

After Globalization Robert K. Schaeffer, 2021-09-20 In the 1980s U S officials adopted tax and monetary policies that channeled huge new resources into Wall Street which fueled a stock market boom To increase profits and payouts to investors as stock prices soared corporate managers consolidated businesses outsourced manufacturing to low wage countries and adopted new technologies to increase productivity Government officials then facilitated mergers and negotiated free trade agreements to speed the process of globalization Wall Street became an engine of capital accumulation and a force for global change These developments resulted in massive job losses and stagnant wages for most Americans Meanwhile tax cuts and the stock market boom created vast new wealth for the rich and the top 10 percent seized 50 percent of all income in the United States The result was growing economic inequality During the decades that followed globalization triggered regional economic crises toppled governments transformed societies galvanized economic development in China and created new forms of wealth and inequality around the world Then in 2008 a financial crisis rooted in Wall Street triggered the Great Recession wrecked the legitimacy of globalization as a development strategy and unleashed populist or restrictionist social movements and political parties that challenged globalization and attacked its economic and political foundations This book examines the origins of globalization in the 1980s the developments that triggered the Great Recession and the political and economic forces that contributed to the disintegration of globalization as a force for change in the modern world After Globalization explains what happened and what comes next

Capitalist Peace Thomas W. Zeiler, 2022 This wide ranging history of modern America demonstrates that the idea of a capitalist peace cast free trade as an engine of US foreign policy and the key to global prosperity from the 1930s to the present

Dream Car Dimitry Anastakis, 2024-03-26 Dream Car tells the story of entrepreneur Malcolm Bricklin s fantastical 1970s era Safety Vehicle 1 SV1 audaciously launched during a tumultuous breakpoint in postwar history The tale of the sexy yet safe SV1 reveals the influence of automobiles on ideas about the future technology entrepreneurship risk safety showmanship politics sex gender business and the state as well as the history of the

auto industry's birth, decline, and rebirth. Written as an open road, the book invites readers to travel a narrative arc that unfolds chronologically and thematically. Dream Car's seven chapters have been structured so that they can be read in any order determined by whichever theme each reader finds most interesting. The book also includes a musical playlist of car songs from the era and songs about the SV1 itself.

American Global Pre-eminence William R. Thompson, 2022 A unique analysis that assesses how we can determine which country will be the next world leader. Will China surpass the United States as the world's leader? In *American Global Pre-eminence*, William R. Thompson argues that the answer depends on leads in technological innovation, energy, and global reach. These are the forces that influence the hierarchy of global power, a system which began emerging a thousand years ago and started becoming more evident after the 1490s, especially after Dutch activities in the seventeenth century and British operations in the nineteenth century. The US followed in this fashion after 1945. Yet leads do not last forever. Ironically, as it becomes clearer how technological innovation, military force, and energy power interact, the processes under scrutiny may themselves be fundamentally transforming. Thus, Thompson contends the real policy question is not whether the US is ahead or behind China, but rather whether it will remain possible for a single state to lead the global system. As technological innovation, energy consumption, and global reach capability grow less concentrated, the prospects for systemic leadership shrink even as global problems become more complex and acute. With a sweeping analysis of global power, Thompson provides a foundation for understanding the realities and possibilities of lead states past, present, and future.

Advanced Manufacturing William B. Bonvillian, Peter L. Singer, 2023-12-05 How to rethink innovation and revitalize America's declining manufacturing sector by encouraging advanced manufacturing, bringing innovative technologies into the production process. The United States lost almost one-third of its manufacturing jobs between 2000 and 2010. As higher-paying manufacturing jobs are replaced by lower-paying service jobs, income inequality has been approaching third-world levels. In particular, between 1990 and 2013, the median income of men without high school diplomas fell by an astonishing 20%, and that of men with high school diplomas or some college fell by a painful 13%. Innovation has been left largely to software and IT startups, and increasingly, US firms operate on a system of innovate here, produce there, leaving the manufacturing sector behind. In this book, William Bonvillian and Peter Singer explore how to rethink innovation and revitalize America's declining manufacturing sector. They argue that advanced manufacturing, which employs such innovative technologies as 3D printing, advanced material, photonics, and robotics in the production process, is the key. Bonvillian and Singer discuss transformative new production paradigms that could drive up efficiency and drive down costs, describe the new processes and business models that must accompany them, and explore alternative funding methods for startups that must manufacture. They examine the varied attitudes of mainstream economics toward manufacturing, the post-Great Recession policy focus on advanced manufacturing, and lessons from the new advanced manufacturing institutes. They consider the problem of startup scaleup, possible new models for training workers, and the role

of manufacturing in addressing secular stagnation in innovation growth the middle classes productivity rates and related investment As recent political turmoil shows the stakes could not be higher

The Cloud Revolution Mark P. Mills, 2021-11-02 The conventional wisdom on how technology will change the future is wrong Mark Mills lays out a radically different and optimistic vision for what s really coming The mainstream forecasts fall into three camps One considers today as the new normal where ordering a ride or food on a smartphone or trading in bitcoins is as good as it s going to get Another foresees a dystopian era of widespread digitally driven job and business destruction A third believes that the only technological revolution that matters will be found with renewable energy and electric cars But according to Mills a convergence of technologies will instead drive an economic boom over the coming decade one that historians will characterize as the Roaring 2020s It will come not from any single big invention but from the confluence of radical advances in three primary technology domains microprocessors materials and machines Microprocessors are increasingly embedded in everything Materials from which everything is built are emerging with novel almost magical capabilities And machines which make and move all manner of stuff are undergoing a complementary transformation Accelerating and enabling all of this is the Cloud history s biggest infrastructure which is

itself based on the building blocks of next generation microprocessors and artificial intelligence We've seen this pattern before The technological revolution that drove the great economic expansion of the twentieth century can be traced to a similar confluence one that was first visible in the 1920s a new information infrastructure telephony new machines cars and power plants and new materials plastics and pharmaceuticals Single inventions don't drive great long cycle booms It always takes convergent revolutions in technology's three core spheres information materials and machines Over history that's only happened a few times We have wrung much magic from the technologies that fueled the last long boom But the great convergence now underway will ignite the 2020s And this time unlike any previous historical epoch we have the Cloud amplifying everything The next long boom starts now *Powering Up Canada* R.W. Sandwell, 2016-11-01 With growing concerns about the security cost and ecological consequences of energy use people around the world are becoming more conscious of the systems that meet their daily needs for food heat cooling light transportation communication waste disposal medicine and goods *Powering Up Canada* is the first book to examine in detail how various sources of power fuel and energy have sustained Canadians over time and played a pivotal role in their history *Powering Up Canada* investigates the ways that the production processing transportation use and waste issues of various forms of energy changed over time transforming almost every aspect of society in the process Chapters in the book's first part explore the energies of the organic regime food animal muscle water wind and firewood while those in the second part focus on the coal oil gas hydroelectricity and nuclear power that define the mineral regime Contributors identify both continuities and disparities in Canada's changing energy landscape in this first full overview of the country's distinctive energy history Reaching across disciplinary boundaries these essays not only demonstrate why and how energy serves as a lens through which to better understand the country's history but also provide ways of thinking about some of its most pressing contemporary concerns Engaging Canadians in an urgent international discussion on the social and environmental history of energy production and use and its profound impact on human society *Powering Up Canada* details the nature and significance of energy in the past present and future Contributors include Jenny Clayton University of Victoria George Colpitts University of Calgary Colin Duncan Queen's University J I Little Emeritus Simon Fraser University Joanna Dean Carleton University Matthew Evenden University of British Columbia Laurel Sefton MacDowell Emerita University of Toronto Mississauga Joshua MacFadyen Arizona State University Eric Sager University of Victoria Jonathan Peyton University of Manitoba Steve Penfold University of Toronto Philip van Huizen McMaster University Andrew Watson University of Saskatchewan and Lucas Wilson independent scholar *Innovation and Adaptation in War* Matthew A. Tattar, 2025-05-20 An analysis of advances in military technology that illustrates the importance of organizational flexibility in both an attacker's innovations and an opponent's adaptations How important is military innovation in determining outcomes during armed conflict In *Innovation and Adaptation in War* Matthew Tattar questions the conventional wisdom that to succeed military organizations must innovate early and often Because successful

methods of warfare are soon widely imitated or countered on the international stage the advantages of a particular innovation quickly evaporate Therefore Tattar argues large scale innovations at the cost of organizational flexibility and the ability to adapt to an adversary's innovations may not be the optimal path not just because force readiness is vital but also because innovation does not provide as long lasting and decisive an advantage as may have been previously thought Although other scholars have analyzed the sources of military innovation Tattar is the first to focus on the relationship between innovation and specific military outcomes Looking at several different types of military organizations and many different types of battles he draws on theoretical works in depth historical research and case studies and finds that the initial advantages that are generated by innovation disappear far too rapidly in wartime for militaries to depend on them for victory Furthermore as Tattar demonstrates emphasizing innovation in defense planning at the expense of organizational flexibility can have significant negative consequences The decisive factor in successful adaptation more often than not is a well positioned and flexible organization Providing both a new framework for studying military innovation and a comprehensive review of the current literature in this field *Innovation and Adaptation in War* offers crucial policymaking insights into when and under what circumstances militaries should innovate and adapt **2013** Massimo Mastrogregori, 2017-11-20 Every year the Bibliography catalogues the most important new publications historiographical monographs and journal articles throughout the world extending from prehistory and ancient history to the most recent contemporary historical studies Within the systematic classification according to epoch region and historical discipline works are also listed according to author's name and characteristic keywords in their title *Manufacturing Jobs in the U.S.* Amy Francis, 2015-04-27 One of America's greatest strengths is its manufacturing know how Many companies however send jobs off shore to other countries This causes a number of issues relating to employment trade and the country's economy This book discusses whether there is a strong American workforce available for new manufacturing jobs whether American youths are interested in manufacturing and whether the United States can compete with overseas manufacturers *Working Cities* Howard Davis, 2019-12-12 Cities have historically supported production commerce and consumption all central to urban life But in the contemporary Western city production has been hidden or removed and commerce and consumption have dominated This book is about the importance of production in the life of the city and the relationships between production architecture and urban form It answers the question What will cities be like when they become once again places of production and not only of consumption Through theoretical arguments historical analysis and descriptions of new initiatives *Working Cities Architecture Place and Production* argues that contemporary cities can regain their historic role as places of material production places where food is processed and things are made The book looks toward a future that builds on this revival providing architectural and urban examples and current strategies within the framework of a strong set of historically based arguments The book is illustrated in full colour with archival and contemporary photographs maps and diagrams especially developed for the book The

diagrams help illustrate the different variables of architectural space urban location and production in different historical eras and in different kinds of industries providing a compelling visual understanding for the reader
