The Common Sense behind Basic Economics Justin Vélez-Hagan,2015-10-22 Although it may sometimes seem like studying trigonometry in Latin basic economics really is just plain common sense But it s become so complicated in its presentation that very few are able to learn the basics Whether academics researchers pundits or legislators few seem to have the skills to present economic topics in easy to understand language or they simply don t know very much themselves With such misinformation being strewn about it s easy to see why the average citizen first year economics student young professional or even elected

official becomes so easily confused The truth however is that basic economics is actually quite simple and even more commonsensical and it should be explained that way It rarely is however and that s why I ve written this book to explain the basics of the basics in simple and easy to understand language that isn t drier than the Atacama Desert without the charts graphs and formulas typically found in text books Adding in an occasional dash of humor and politics this book is intended to be a fun Cliff s Notes style supplement to the typical basic econ textbook but can also be used as a standalone introduction Topics include most of the themes presented in an Econ 101 course as well as a number of end of chapter discussions on the policies relevant to economics today **Ebook: Microeconomics, Global Edition** MCCONNELL,2011-09-16 Ebook

Microeconomics Global Edition **3D Printing** Bibi van den Berg,Simone van der Hof,Eleni Kosta,2015-12-24 The book in front of you is the first international academic volume on the legal philosophical and economic aspects of the rise of 3D printing In recent years 3D printing has become a hot topic Some claim that it will revolutionize production and mass consumption enabling consumers to print anything from clothing automobile parts and guns to various foods medication and spare parts for their home appliances This may significantly reduce our environmental footprint but also offers potential for innovation and creativity At the same time 3D printing raises social ethical regulatory and legal questions If individuals can print anything they want how does this affect existing systems of intellectual property rights What are the societal consequences of the various types of products one can print with a 3D printer for example weapons Should all aspects of 3D printing be regulated and if so how and to what ends How will businesses have to change their way of working and their revenue model in light of the shift to printing on demand How will the role of product designers change in a world where everyone has the potential to design their own products These and other questions are addressed in high quality and in depth contributions by academics and experts bringing together a wide variety of academic discussions on 3D printing from different disciplines as well as presenting new views broadening the discussion beyond the merely technical dimension of 3D printing Bibi van den Berg is Associate Professor at eLaw the Center for Law and Digital Technologies at Leiden University The Netherlands Simone van der Hof is Full Professor at eLaw in Leiden and Eleni Kosta is Associate Professor at TILT the Tilburg Institute for Law Technology and Society at Tilburg University The Netherlands
