Groundwater Modelling in Arid and Semi-Arid Areas Howard S. Wheeler,Simon A. Mathias,Xin Li,2010-09-09 Arid and semi arid regions face major challenges in the management of scarce freshwater resources under pressures of population economic development climate change pollution and over abstraction Groundwater is commonly the most important water resource in these areas Groundwater models are widely used globally to understand groundwater systems and to guide decisions on management However the hydrology of arid and semi arid areas is very different from that of humid regions and there is little guidance on the special challenges of groundwater modelling for these areas This book brings together the experience of internationally leading experts to fill a gap in the scientific and technical literature It introduces state of the art methods for modelling groundwater resources illustrated with a wide ranging set of illustrative examples from around the world The book is valuable for researchers practitioners in developed and developing countries and graduate students in hydrology hydrogeology water resources management environmental engineering and geography **Groundwater and**

Human Development Emilia Bocanegra,Mario Hernandez,Eduardo Usunoff,2005-06-30 It has long been recognized that groundwater plays a central role in the development of human societies Groundwater resources are readily and reliably available compared with surface water resources In many contexts the presence of groundwater ensures the presence of life itself The XXXII IAH International Association of Hydrogeologists and VI ALHSUD Latin American Association of Groundwater Hydrology for Development Congress on Groundwater and Human Development held in 2002 in Mar del Plata Argentina brought together over 400 participants from more than 40 countries This lively gathering of water enthusiasts
