**Handbook of Machine Olfaction** Tim C. Pearce, Susan S. Schiffman, H. Troy Nagle, Julian W. Gardner, 2006-01-24  
Electronic noses are instruments which mimic the sense of smell. Consisting of olfactory sensors and a suitable signal processing unit, they are able to detect and distinguish odors precisely and at low cost. This makes them very useful for a remarkable variety of applications in the food and pharmaceutical industry, in environmental control or clinical diagnostics and more. The scope covers biological and technical fundamentals and up to date research. Contributions by renowned international scientists as well as application oriented news from successful e nose manufacturers give a well rounded account of the topic and this coverage from R D to applications makes this book a must have read for e nose researchers, designers and users alike. Handbook of Machine Olfaction Tim C. Pearce, 2003

**Biologically Inspired Signal Processing for Chemical Sensing** Agustín Gutiérrez, Santiago Marco, 2009-05-11  
Biologically inspired approaches for artificial sensing have been extensively applied to different sensory modalities over the last decades and chemical senses have been no exception. The olfactory system and the gustatory system to a minor extent has been regarded as a model for the development of new artificial chemical sensing systems. One of the main contributions to this field was done by Persaud and Dodd in 1982 when they proposed a system based on an array of broad selective chemical sensors coupled with a pattern recognition engine. The array aimed at mimicking the sensing strategy followed by the olfactory system where a population of broad selective olfactory receptor neurons encodes for chemical information as patterns of activity across the neuron population. The pattern recognition engine proposed was not based on bio inspired but on statistical methods. This influential work gave rise to a new line of research where this paradigm has been used to build chemical sensing instruments applied to a wide range of odor detection problems. More recently some researchers have proposed to extend the biological inspiration of this system also to the processing of the sensor array signals. This has been motivated in part by the increasing body of knowledge available on biological olfaction which has become in the last decade a focus of attention of the experimental neuroscience community. **Electronic Nose Technologies and Advances in Machine Olfaction** Albastaki, Yousif
