Handbook of Nonlinear Optical Crystals Valentin G. Dmitriev, Gagik G. Gurzadyan, David N. Nikogosyan, 2013-04-17 Four years ago when we had finished our work on the first edition of our Handbook we didn't even suppose that three years later it would become necessary to greatly revise and update the material It happened because of the following developments 1 The invention and tremendous development of modern nonlinear optical crystals such as BBO LBO KTP ZnGeP etc 2 2 Rapid

progress in laser techniques femtosecond CPM laser Ti sapphire laser diode pumped solid state lasers etc 3 The appearance of numerous organic crystals which can be synthesized with predictable properties 4 Progress in the theory of nonlinear frequency conversion utilizing biaxial crystals femtosecond pulses etc 5 Accumulation of new data on the properties of nonlinear optical crystals In accordance with the above we have made many changes in the text The first chapter was revised by D N Nikogosyan the second one by V G Dmitriev and D N Nikogosyan and the fourth one by G G Gurzadyan The third chapter containing the main reference material on 77 nonlinear optical crystals was completely rewritten and updated by D N Nikogosyan The Appendix containing the list of most commonly used laser wavelengths was compiled by D N Nikogosyan We would appreciate any valuable comments and recommendations that will allow us to further improve the Handbook We would like to thank H K V Lotsch for fruitful and long lasting cooperation Optics for Engineers Charles A.
