Progress in Pattern Recognition, Image Analysis, Computer Vision, and Applications Isabelle Bloch, Roberto M. Cesar, Jr., 2010-11-02 Pattern recognition is a central topic in contemporary computer sciences with continuously evolving topics challenges and methods including machine learning content based image retrieval and model and knowledge based approaches just to name a few The Iberoamerican Congress on Pattern Recognition CIARP has become established as a high quality conference highlighting the recent evolution of the domain These proceedings include all papers presented during the 15th edition of this conference held in Sao Paulo Brazil in November 2010 As was the case for previous conferences CIARP 2010 attracted participants from around the world with the aim of promoting and disseminating going research on mathematical methods and computing techniques for pattern recognition computer vision image analysis and speech recognition as well as their applications in such diverse areas as robotics health entertainment space exploration telecommunications data mining document analysis and natural language processing and recognition to name only a few of them Moreover it provided a forum for scientific research experience exchange sharing new

knowledge and increasing cooperation between research groups in pattern recognition and related areas. It is important to underline that these conferences have contributed significantly to the growth of national associations for pattern recognition in the Iberoamerican region, all of them as members of the International Association for Pattern Recognition (IAPR).

Compression of an array of similar crash test simulation results Stefan Peter Müller,2022-02-08 Big data thrives on extracting knowledge from a large number of data sets But how is an application possible when a single data set is several gigabytes in size The innovative data compression techniques from the field of machine learning and modeling using Bayesian networks which have been theoretically developed and practically implemented here can reduce these huge amounts of data to a manageable size By eliminating redundancies in location time and between simulation results data reductions to less than 1% of the original size are possible The developed method represents a promising approach whose use goes far beyond the application example of crash test simulations chosen here

The Informatics Handbook S.A. Fist, 2012-12-06 This is not a dictionary and nor is it an encyclopedia It is a reference and compendium of useful information about the converging worlds of computers communications telecommunications and broadcasting You could refer to it as a guide for the Information Super Highway but this would be pretentious It aims to cover most of the more important terms and concepts in the developing discipline of Informatics which in my definition includes the major converging technologies and the associated social and cultural issues Unlike a dictionary this handbook makes no attempt to be prescriptive in its definitions Many of the words we use today in computing and communications only vaguely reflect their originations And with such rapid change older terms are often taken twisted inverted and mangled to the point where any attempt by me to lay down laws of meaning would be meaningless The information here is descriptive I am concerned with usage only This book therefore contains keywords and explanations which have been culled from the current literature from technical magazines newspapers the Internet forums etc This is the living language as it is being used today not a historical artifact of 1950s computer science
