Advances in Grid and Pervasive Computing Song Wu, Laurence Tianruo Yang, Tony Li Xu, 2008-05-13 Welcome to the proceedings of the 2008 International Conference on Grid and Pervasive Computing GPC 2008 which was held in Kunming Yunnan China May 25 28 2008 Grid computing presents a new trend in distributed computing for coordinating large scale heterogeneous resource sharing and problem solving in dynamic multi institutional virtual organizations Grid computing not only can be used for distributed supercomputing massive data

processing but can also be a common platform and way for utility and service computing. It covers mainframes, supercomputers as well as more powerful personal computers and even small and smart devices ranging from personal digital assistants to unseen chips in our cars, appliances and telephones. Projecting this trend into the future, we envision an explosion of interconnected high performance computers and smart devices that can make our research and daily lives easier and more productive.

Grid and Pervasive Computing GPC is an annual international conference on the emerging areas of merging grid computing and pervasive computing. GPC provides a high profile leading edge forum for researchers and engineers alike to present their latest research in the field of grid computing and pervasive computing.

Cloud computing is the current most trendy and social technology that has been launched on the network world which can also be called as a reincarnation or evolution of Grid computing so the Clouds are considered as a new generation of Grid computing. These Clouds consist of data centres which are owned by individual institute organisations or companies. The homogeneity within each data centre in the infrastructure is the main feature for the cloud computing compared to grid computing. Cloud Computing has become another most used word on internet after Web 2.0. There are many definitions for Cloud computing and there seems to be no consensus on what a Cloud is. Cloud Computing is not a completely new concept; it has intricate connection to the relatively new but thirteen year established Grid Computing paradigm and other relevant technologies such as utility computing, cluster computing and distributed systems when we go through the structure and working of a Cloud.
