Sustaining Groundwater Resources J. Anthony A. Jones, 2011-07-21 Burgeoning population and climate change are among the most critical challenges facing the 21st century Both have critical implications for groundwater resources especially in many developing countries where resources are already under pressure Due to low rainfall and high evaporation in parts of the Middle East and North Africa groundwater is not being renewed and groundwater laid down up to 10 000 years ago is literally being mined for irrigation often very inefficiently Over recent decades groundwater levels have fallen dramatically in key grain growing regions like the American Great Plains and the North China Plain As the population grows and emerging

economies like China and India demand more food especially water intensive meat products agricultural demand for water is set to increase The rapid shift of population from the countryside to the cities is also adding to this pressure most old wells in Beijing are now dry Pollution from industry agriculture and shanty towns is destroying many groundwater resources some could take 50 years to clean up even with strict and immediate controls This volume looks at the technical socio economic and political problems being faced and at the developments in groundwater science and management that may help create a sustainable future for our planet

Water Pollution Issues and Developments Sarah V. Thomas, 2008 Pollution is undesirable state of the natural environment being contaminated with harmful substances as a consequence of human activities so that the environment becomes harmful or unfit for living things especially applicable to the contamination of soil water or the atmosphere by the discharge of harmful substances In addition to the harm to living beings both present or future and known or unknown pollution cleanup and surveillance are enormous financial drains of the economies of the world This book focuses on issues and developments critical for the field

Environmental Toxicology and Chemistry, 1994 The Quarterly Journal of Engineering Geology, 1995 *Waste Is Information* Dietmar Offenhuber, 2023-12-05 The relationship between infrastructure governance and the ways we read and represent waste systems examined through three waste tracking and participatory sensing projects Waste is material information Landfills are detailed records of everyday consumption and behavior much of what we know about the distant past we know from discarded objects unearthed by archaeologists and interpreted by historians And yet the systems and infrastructures that process our waste often remain opaque In this book Dietmar Offenhuber examines waste from the perspective of information considering emerging practices and technologies for making waste systems legible and how the resulting datasets and visualizations shape infrastructure governance He does so by looking at three waste tracking and participatory sensing projects in Seattle S o Paulo and Boston Offenhuber expands the notion of urban legibility the idea that the city can be read like a text to introduce the concept of infrastructure legibility He argues that infrastructure governance is enacted through representations of the infrastructural system and that these representations stem from the different stakeholders interests which drive their efforts to make the system legible The Trash Track project in Seattle used sensor technology to map discarded items through the waste and recycling systems the Forager

project looked at the informal organization processes of waste pickers working for Brazilian recycling cooperatives and mobile systems designed by the city of Boston allowed residents to report such infrastructure failures as potholes and garbage spills Through these case studies Offenhuber outlines an emerging paradigm of infrastructure governance based on a complex negotiation among users technology and the city Challenges facing Education Leadership in the Shadow of War Mary Gutman,2024-12-31 This incredibly timely volume offers insight into how educational leadership is managed demonstrated and enacted in zones of conflict underlining the pivotal role educational leadership plays in peacebuilding and conflict resolution efforts internationally Employing qualitative quantitative and theoretical methodologies as well as on the ground lived experiences and empirical case studies the book s diverse chapters showcase perspectives from areas of current or historic conflicts in Israel Ukraine Russia Germany USA Afghanistan Pakistan and Norway Guided by the overarching themes of resilience decision making inclusion and post conflict rebuilding the chapters focus on a range of leadership contexts such as the Arab Bedouin and Ukrainian education systems refugee Ukrainian children in Germany the work of women educational leaders in Pakistan and the experience of Israeli educational leaders during the conflict Ultimately making a significant and groundbreaking addition to the literature on educational leadership in conflict zones this book will be necessary for researchers scholars and postgraduate students working in educational leadership and strategy international and comparative education and sociology of education Policymakers working in war and conflict studies as well as educational crisis may also benefit from the volume **Focus on International Joint Commission Activities** ,1990
