Todd, Larry W. Mays, 2004-08-06 Continuing in its forty year history of providing students and professionals with a thorough grounding in the science and technology of groundwater hydrology this third edition has been completely updated to reflect the tremendous changes in the field A true essential reference this book provides a unified presentation of groundwater hydrology treating fundamental principles methods and problems encountered in the field as a whole Since the earlier editions of this book in 1959 and 1980 the groundwater resource field has made tremendous strides in awareness of the environment concerns and competition for water supplies contamination of groundwater and enhanced regulation of water resources This new edition includes the many new developments that have occurred in the groundwater field Chief among these is the role of computers not only for organizing data and solving problems but also in managing groundwater resources on a basin wide basis for known or anticipated inputs and outputs Special focus is placed on modern groundwater modeling methods including a detailed description of MODFLOW Intended Courses Departments of Civil and Environmental Engineering Geology Hydrogeology One or two term course called Groundwater Hydrology Junior or senior level or graduate level *Water Resources Systems Planning and Management* Sharad K. Jain, V.P. Singh, 2003-09-12 This book is divided into four parts The first part Preliminaries begins by introducing the basic theme of the book It provides an overview of the current status of water resources utilization the likely scenario of future demands and advantages and disadvantages of systems techniques An understanding of how the hydrological data are measured and processed is important before undertaking any analysis The discussion is extended to emerging techniques such as Remote Sensing GIS Artificial Neural Networks and Expert Systems The statistical tools for data analysis including commonly used probability distributions parameter estimation regression and correlation frequency analysis and time series analysis are discussed in a separate chapter Part 2 Decision Making is a bouquet of techniques organized in 4 chapters After discussing optimization and simulation the techniques of economic analysis are covered Recently environmental and social aspects and rehabilitation and resettlement of project affected people have come to occupy a central stage in water resources management and any good book is incomplete unless these topics are adequately covered The concept of rational decision making along with risk reliability and uncertainty aspects form subject matter of a chapter With these analytical tools the practitioner is well

equipped to take a rational decision for water resources utilization Part 3 deals with Water Resources Planning and Development This part discusses the concepts of planning the planning process integrated planning public involvement and reservoir sizing The last part focuses on Systems Operation and Management After a resource is developed it is essential to manage it in the best possible way Many dams around the world are losing some storage capacity every year due to sedimentation and therefore the assessment and management of reservoir sedimentation is described in details No analysis of water resources systems is complete without consideration of water quality A river basin is the natural unit in which water occurs The final chapter discusses various issues related to holistic management of a river basin Compendium of drinking-water systems and technologies from source to consumer World Health Organization,2025-10-13 Safe and reliable drinking water supply depends on effective risk management appropriate regulation and support and well informed technology selection The Compendium of drinking water systems and technologies from source to consumer the Compendium provides a structured reference for local level engineers planners practitioners and decision makers seeking to strengthen drinking water supply systems in diverse contexts Taking a whole of system perspective in line with water safety planning principles the Compendium outlines typical supply configurations and disaggregates them into functional components including source treatment distribution and household level practices By consolidating technical and operational knowledge and good practices the Compendium enables evidence based decision making and supports the selection of solutions that are appropriate to local conditions resources and water quality challenges It links technology choice to health targets and management approaches reinforcing the progressive implementation of WHO s Framework for safe drinking water Cross cutting themes such as risk based management and monitoring life cycle considerations inclusion and strengthening resilience are addressed to promote sustainable and equitable services As a companion to WHO s 2024 Guidelines for drinking water quality small water supplies and Sanitary inspection packages the Compendium facilitates planning stakeholder engagement and capacity development towards safely managed drinking water services for all
