Growth Management Lawrence B. Burrows, 2017-09-08 There are specific topics which in microcosm bring together many of the strands of a whole society The pressures at work in responding to the problems involved in these topics both in implementing and retarding their resolution provide a unique insight into the strains of our time In many ways the subject of growth controls is a prime exemplar of this species Grouped under this rubric are all the environmental concerns which are increasingly prominent the natural limits of land holding capacity the trade offs between intensive land use and the physical limitations of earth and space But these elements while far from being defined are much more finite than the particulars at the other end of the spectrum that of the character and individual substance and way of life which revolve around the level of intensity of land use For example as we near the end of the twentieth century an increasing demand is heard for a return to the simpler more bucolic environment Just as the suburb replaced the city as the prime location so the suburb in turn finds it very difficult to compete against the lures of the countryside The drive towards exurbia and with it greater levels of decentralization and with it greater levels of decentralization becomes a dominant theme at least for the affluent All these and many other elements are at work within the simple title of Growth Management [Growth Management and Affordable Housing](#) Anthony Downs, 2004-06-15 Advocates of growth management and smart growth often propose policies that raise housing prices thereby making housing less affordable to many households trying to buy or rent homes Such policies include urban growth boundaries zoning restrictions on multi family housing utility district lines building permit caps and even construction moratoria Does this mean there is an inherent conflict between growth management and smart growth on the one hand and creating more affordable housing on the other Or can growth management and smart growth promote policies that help increase the supply of affordable housing These issues are critical to the future of affordable housing because so many local communities are adopting various forms of growth management or smart growth in response to growth related problems Those problems include rising traffic congestion the absorption of open space by new subdivisions and higher taxes to pay for new infrastructures This book explores the relationship between growth management and smart growth and affordable housing in depth It draws from material presented at a symposium on these subjects held at the Brookings Institution in May 2003 sponsored by the U S Department of Housing and Urban Development the National Association of Realtors and the Fannie Mae Foundation Contributors seek to inform the debate and provide some useful answers to help the nation accommodate the curtailment of growth in urban and suburban domains while still ensuring a supply of affordable

The No-growth Imperative Gabor Zovanyi, 2013 More than two decades of mounting evidence confirms that the existing scale of the human enterprise has surpassed global ecological limits to growth Based on such limits The No Growth Imperative discounts current efforts to maintain growth through eco efficiency initiatives and smart growth programs and argues that growth is inherently unsustainable and that the true nature of the challenge confronting us now is one of replacing the current growth imperative with a no growth imperative Gabor Zovanyi asserts that anything less than stopping growth would merely slow today's dramatic degradation and destruction of ecosystems and their critical life support services Zovanyi makes the case that local communities must take action to stop their unsustainable demographic economic and urban increases as an essential prerequisite to the realization of sustainable states The book presents rationales and legally defensible strategies for stopping growth in local jurisdictions and portrays the viability of no growth communities by outlining their likely economic social political and physical features It will serve as a resource for those interested in shifting the focus of planning from growth accommodation to the creation of stable sustainable communities While conceding the challenges associated with transforming communities into no growth entities Zovanyi concludes by presenting evidence that suggests that prospects for realizing states of no growth are greater than might be assumed
