Fault Tolerant Attitude Estimation for Small Satellites Chingiz Hajiyev, Halil Ersin Soken, 2020-12-22 Small satellites use commercial off the shelf sensors and actuators for attitude determination and control ADC to reduce the cost

These sensors and actuators are usually not as robust as the available more expensive space proven equipment. As a result the ADC system of small satellites is more vulnerable to any fault compared to a system for larger competitors. This book aims to present useful solutions for fault tolerance in ADC systems of small satellites. The contents of the book can be divided into two categories: fault tolerant attitude filtering algorithms for small satellites and sensor calibration methods to compensate the sensor errors. MATLAB will be used to demonstrate simulations. Presents fault tolerant attitude estimation algorithms for small satellites with an emphasis on algorithms practicability and applicability. Incorporates fundamental knowledge about the attitude determination methods at large. Discusses comprehensive information about attitude sensors for small satellites. Reviews calibration algorithms for small satellite magnetometers with simulated examples. Supports theory with MATLAB simulation results which can be easily understood by individuals without a comprehensive background in this field. Covers up to date discussions for small satellite attitude systems design. Dr Chingiz Hajiyevev is a professor at the Faculty of Aeronautics and Astronautics, Istanbul Technical University, Istanbul, Turkey. Dr Halil Ersin Soken is an assistant professor at the Aerospace Engineering Department, Middle East Technical University, Ankara, Turkey.

Grid-based Nonlinear Estimation and Its Applications Bin Jia, Ming Xin, 2019-04-25

Grid based Nonlinear Estimation and its Applications presents new Bayesian nonlinear estimation techniques developed in the last two decades. Grid based estimation techniques are based on efficient and precise numerical integration rules to improve performance of the traditional Kalman filtering based estimation for nonlinear and uncertainty dynamic systems. The unscented Kalman filter, Gauss Hermite quadrature filter, cubature Kalman filter, sparse grid quadrature filter and many other numerical grid based filtering techniques have been introduced and compared in this book. Theoretical analysis and numerical simulations are provided to show the relationships and distinct features of different estimation techniques. To assist the exposition of the filtering concept, preliminary mathematical review is provided. In addition, rather than merely considering the single sensor estimation, multiple sensor estimation including the centralized and decentralized estimation is included. Different decentralized estimation strategies including consensus diffusion and covariance intersection are investigated. Diverse engineering applications such as uncertainty propagation, target tracking, guidance, navigation and control are presented to illustrate the performance of

different grid based estimation techniques Error Estimation for Pattern Recognition Ulisses M. Braga Neto, Edward R. point boundary value problems for systems of linear first order ordinary differential equations from indirect observations which are linear transformations of the same solutions perturbed by additive random noises It is assumed that right hand sides of equations and boundary data as well as statistical characteristics of random noises in observations are not known and belong to certain given sets in corresponding functional spaces This leads to the necessity of introducing the minimax statement of an estimation problem when optimal estimates are defined as linear with respect to observations estimates for which the maximum of mean square error of estimation taken over the above mentioned sets attains minimal value Such estimates are called minimax or guaranteed estimates It is established that these estimates are expressed explicitly via solutions to some uniquely solvable linear systems of ordinary differential equations of the special type The authors apply these results for obtaining the optimal estimates of solutions from indirect noisy observations Similar estimation problems for solutions of boundary value problems for linear differential equations of order n with general boundary conditions are considered The authors also elaborate guaranteed estimation methods under incomplete data of unknown right hand sides of equations and boundary data and obtain representations for the corresponding guaranteed estimates In all the cases estimation errors are determined
