Never having liked such foods as beer and chicken nuggets, she suddenly started craving them. After an extraordinary dream, she seeks out the family of her donor, a teenaged boy who died in a motorcycle accident, and learns that it is indeed possible for two souls to merge in one body. This is a story that must be told and heard, a fascinating example of how cellular memory can outlive physical death.

Deepak Chopra, M.D.

A Life Everlasting Sarah Gray, 2016-09-27 A donor mother's powerful memoir of grief and rebirth that is also a fascinating medical science whodunit taking us inside the world of organ, eye, tissue, and blood donation and cutting-edge scientific research. When Sarah Gray received the devastating news that her unborn son, Thomas, was diagnosed with anencephaly, a terminal condition, she decided she wanted his death and life to have meaning. In the weeks before she gave birth to her twin sons in 2010, she arranged to donate Thomas's organs. Due to his low birth weight, they would go to research rather than transplant. As transplant donors have the opportunity to meet recipients, Sarah wanted to know how Thomas's donation would be used. That curiosity fueled a scientific odyssey that leads Sarah to some of the most prestigious scientific facilities in the country, including Harvard, Duke, and the University of Pennsylvania. Pulling back the curtain of protocol and confidentiality, she introduces the researchers who received Thomas's donations: held his liver in their hands, studied his cells under the microscope. Sarah's journey to find solace and understanding takes her beyond her son's donations, offering a breathtaking overview of the world of medical research and the valiant scientists on the horizon of discovery. She goes behind the scenes at organ procurement organizations, introducing skilled technicians for whom death means saving lives, empathetic counselors, and the brilliant minds who are finding surprising and inventive ways to treat and cure disease through these donations. She also shares the moving stories of other donor families.

A Life Everlasting is an unforgettable testament to hope, a tribute to life and discovery, and a portrait of unsung heroes pushing the boundaries of medical science for the benefit of all humanity.

Raising the Dead Ronald Munson, 2002-01-17 Perhaps no medical breakthrough in the twentieth century is more spectacular more hope giving or more fraught with ethical questions than organ transplantation Each year some 25 000 Americans are pulled back from the brink of death by receiving vital new organs Another 5 000 die while waiting for them And what distinguishes these two groups has become the source of one of our thorniest ethical questions In Raising the Dead Ronald Munson offers a vivid often wrenchingly dramatic account of how transplants are performed how we decide who receives them and how we engage the entire range of tough issues that arise because of them Each chapter begins with a detailed account of a specific case Mickey Mantle's controversial liver transplant

for example followed by careful analysis of its surrounding ethical questions the charges that Mantle received special treatment because he was a celebrity the larger problems involving how organs are allocated and whether alcoholics should have an equal claim on donor livers In approaching transplant ethics through specific cases Munson reminds us of the complex personal and emotional dimension that underlies such issues The book also ranges beyond our present capabilities to explore the future possibilities in xenotransplantation transplanting animal organs into humans and stem cell technology that would allow doctors to grow new organs from the patient s own cells Based on extensive scientific research but written with a novelist s eye for the human condition *Raising the Dead* shows readers the reality of organ transplantation now the possibility of what it may become and how we might respond to the ethical challenges it forces us to confront **The Hero**

Sharp, 2006-10-04

Strange Harvest illuminates the wondrous yet disquieting medical realm of organ transplantation by drawing on the voices of those most deeply involved transplant recipients clinical specialists and the surviving kin of deceased organ donors In this rich and deeply engaging ethnographic study anthropologist Lesley Sharp explores how these parties think about death loss and mourning especially in light of medical taboos surrounding donor anonymity As Sharp argues new forms of embodied intimacy arise in response and the riveting insights gleaned from her interviews observations and descriptions of donor memorials and other transplant events expose how patients and donor families make sense of the transfer of body parts from the dead to the living For instance all must grapple with complex yet contradictory clinical assertions of death as easily detectable and absolute nevertheless transplants are regularly celebrated as forms of rebirth and donors as living on in others bodies New forms of sociality arise too recipients and donors relatives may defy sanctions against communication and through personal
