Kratina, 2004 For today's Americans it is an obsession What should I eat What should I avoid Which foods should I combine How do I get in the zone or eat for my type We must now choose between healthy fats and unhealthy fats good carbs and bad carbs and high glycemic and low glycemic While the formulas for healthful eating increase so do our waistlines The perfect example is the low carbohydrate diet Since the mid 1990s low carb diets have made a phenomenal resurgence led by Dr Robert Atkins program which has been on The New York Times bestseller list continuously for the past five years But his plan is by no means the only one Others also are jockeying to take the low carb crown including the South Beach Diet the latest in the low carb offerings that has pushed its way up the bestseller lists With this resurgence many Americans are now avoiding carbs For the time being carbs appear to be the enemy in many people's minds and stomachs We emphasize for the time being because when it comes to diets nothing lasts forever Americans went through a similar obsession with carbohydrate avoidance a few decades ago when many low carb diet books topped the bestseller lists in the 1960s and 1970s including the original version of Atkins low carb diet Despite their popularity low carb diets had virtually no measurable effect on our waistlines the weight of the average U.S. adult at the end of 70s was essentially the same as it was at the start of the previous decade It seems that a diet limited to primarily protein and fat was not the answer after all And when it comes to dieting it seems Americans cannot resist a fad But no matter what the latest fad diet claims the bottom line is calories regardless of type do count Unfortunately Americans seem to have found out the hard way It's the Calories Not the Carbs was written in part to clarify this point and set the record straight It also was written to show you that eating well and living well is about giving yourself the best possible intake of nutrients to allow your body to be as healthy as possible and to work as well as it

can It is getting the nutrients your body needs for optimal mental performance and emotional balance It is not a set of rules Your body s needs and health goals are completely unique and depend on a whole host of factors from the strengths and weaknesses you were born with to the effects your current environment has on you No single way of eating is perfect for everyone although there are general guidelines that apply to us all Whether your personal health goal is to lose weight maintain your current weight become more active have more energy or just improve your overall health and fitness this guide will show you how to use the Food Guide Pyramid listen to your body and become more active to make lasting healthful lifestyle changes for health and wellness and to say goodbye to fad diets of all types for good **Diet Myths That Keep Us**
