Proctor, 2005-04-21 The relationship between science and religion is generally depicted in one of two ways In one view they are locked in an inevitable eternal conflict in which one must choose a side In the other they are separate spheres in which the truth claims of one have little bearing on the other This collection of provocative essays by leading thinkers offers a new way of looking at this problematic relationship The authors begin from the premise that both science and religion operate in yet seek to reach beyond specific historical political ideological and psychological contexts How may we understand science and religion as arising from yet somehow transcending human experience Among the scholars who explore this question are Bruno Latour Hilary Putnam Jeffrey Burton Russell Daniel Matt Michael Ruse Ronald Numbers Pascal Boyer and Alan Wallace The volume is divided into four sections The first takes a fresh look at the relationship between science and religion in broad terms as spheres of knowledge or belief realms of experience and sources of authority The other three sections take on topics that have been focal points of conflict between science and religion the nature of the cosmos the origin of life and the workings of the mind Ultimately the authors argue by seeing science and religion as irrevocably tied to human experience we can move beyond simple either/or definitions of reality and arrive at a more rich and complex view of both science and religion **Real Miracles, Divine Intervention, and Feats of Incredible Survival** Brad Steiger, Sherry

Seduced by Science Steven Goldberg, 2000-10 American religion Steven Goldberg claims has fallen into a trap Just at the moment when it has amassed the political strength and won the legal right to participate effectively in public debate it has lost its distinctive voice Instead of speaking of human values goals and limits it speaks in the language of science In the United States science has extraordinary influence and respect American religious leaders seeking prestige for their point of view regularly couch their responses to technological developments or defend their faith in scientific terms They claim for instance that medical studies demonstrate the power of prayer that science validates the Bible including its account of creation and that patenting the genetic code is dangerous because genes are the essence of who we are But when ministers priests and rabbis expound on double blind studies and the genetic causes of behavior they do not elevate religion Goldberg maintains they trivialize it Seduced by Science examines how by allowing scientific discourse to set the terms of the debate American religious leaders facilitate religion's move away from its more appropriate and important concerns of values morality and humility Science can tell us a lot about what is but precious little about what ought to be and our religious leaders often miss the chance to add an important voice from a faith based perspective to the public debate that follows scientific advances Discussing the most recent and pressing collisions between science and religion such as the medicinal benefits of prayer the human genome project and cloning Goldberg raises the timely question of what the appropriate role of religion might be in public life today Tackling the legal aspects of religious debate Goldberg suggests ways that religious leaders might confront new scientific developments in a more meaningful fashion
