Speaking of Health Institute of Medicine, Board on Neuroscience and Behavioral Health, Committee on Communication for Behavior Change in the 21st Century: Improving the Health of Diverse Populations, 2002-12-11 We are what we eat That old expression seems particularly poignant every time we have our blood drawn for a routine physical to check our cholesterol levels And it's not just what we eat that affects our health Whole ranges of behaviors ultimately make a difference in how we feel and how we maintain our health Lifestyle choices have enormous impact on our health and well being But how do we communicate the language of good health so that it is uniformly received and accepted by people from different cultures and backgrounds Take for example the case of a 66 year old Latina She has been told by her doctor that she should have a mammogram But her sense of fatalism tells her that it is better not to know if anything is wrong To know that something is wrong will cause her distress and this may well lead to even more health problems Before she leaves her doctor's office she has decided not to have a mammogram that is until her doctor points out that having a mammogram is a way to take care of herself so that she can continue to take care of her family In this way the decision to have a mammogram feels like a positive step Public health communicators and health professionals face dilemmas like this every day Speaking of Health looks at the challenges of delivering important messages to different audiences Using case studies in the areas of diabetes mammography and mass communication campaigns it examines the ways in which messages must be adapted to the unique informational needs of their audiences if they are to have any real impact Speaking of Health looks at basic theories of communication and behavior change and focuses on where

they apply and where they don't By suggesting creative strategies and guidelines for speaking to diverse audiences now and in the future the Institute of Medicine seeks to take health communication into the 21st century In an age where we are inundated by multiple messages every day this book will be a critical tool for all who are interested in communicating with diverse communities about health issues 21st Century Communication: A Reference Handbook William F. Eadie, 2009-05-15 The discipline of communication has grown in popularity from the time professors of journalism and speech decided in the mid 1960s that the term communication was an excellent general descriptor for the theory and research that each group aspired to create Over time the two groups grew closer and recognized significant overlap in their theoretical and research interests but there were also differences in their traditions that kept them apart While both groups agreed that communication is a practical discipline journalism professors focused a great deal of their attention on the education of media professionals Speech professors on the other hand often were more oriented to the liberal arts and valued the fact that communication could be approached from a variety of traditions including the arts humanities social sciences and even the sciences A key term in 21st Century communication however is convergence Not only are media and technology converging with each other to produce new means of communicating but individuals are increasingly using both new and existing communication tools to create new forms of communication This convergence forces the various camps within the communication discipline to draw upon each other's theories and research methods to keep up with explaining the rapidly changing communication environment This convergence of ideas and theories provides a space to challenge conventional ways of thinking about the communication discipline and that's the goal of the SAGE 21st Century Reference Series volumes on Communication General Editor William F Eadie has sought to honor the diversity of the study of communication but also integrate that diversity into a coherent form dividing communication study into four basic properties 1 processes 2 forms and types of communication 3 characteristics to consider in creating messages and 4 relationships between communicators Via 100 chapters this 2 volume set available in both print and electronic formats highlights the most important topics issues questions and debates any student obtaining a degree in the field of communication ought to have mastered for effectiveness in the 21st Century The purpose is to provide undergraduate majors with an authoritative reference source that will serve their research needs going forward in this exciting field with more detailed information than encyclopedia entries but not as much jargon detail or density as a journal article or a research handbook chapter Comprehensive coverage captures all the major themes and subfields within communication For instance Volume 1 themes include the discipline of communication approaches to the study of communication key processes of communication forms and types of communication key characteristics of messages key communication relationships factors affecting communication and challenges and opportunities for communication Themes in Volume 2 are media as communication communication as a profession journalism public relations advertising and media management Authoritative content is provided by a stellar casts of authors who bring
