Redbooks,2017-11-16 This IBM Redbooks publication describes data migrations between IBM DS8000 storage systems where
in most cases one or more older DS8000 models are being replaced by the newer DS8870 model Most of the migration
methods are based on the DS8000 Copy Services The book includes considerations for solutions such as IBM Tivoli
Productivity Center for Replication and the IBM Geographically Dispersed Parallel Sysplex™ GDPS used in IBM z OS
environments Both offerings are primarily designed to enable a disaster recovery using DS8000 Copy Services In most data
migration cases Tivoli Productivity Center for Replication or GDPS will not directly provide functions for the data migration
itself However this book explains how to bring the new migrated environment back into the control of GDPS or Tivoli
Productivity Center for Replication In addition to the Copy Services based migrations the book also covers host based
mirroring techniques using IBM Transparent Data Migration Facility TDMF for z OS and the z OS Dataset Mobility Facility
