Going beyond the Pairs Dennis McCort, 2001-06-21 In *Going beyond the Pairs* Dennis McCort examines the theme of the coincidentia oppositorum the tendency of a thing or relationship to turn under certain conditions into its own opposite as it is expressed in German Romanticism Zen Buddhism and deconstruction McCort argues that the coincidentia can be useful for understanding and comparing a variety of cultural forms including systems of myth religions ancient and modern laws of social organization speculative philosophies East and West psychological theories and therapeutic practices and dynamic organizing principles of music art and literature The book touches on a variety of Western and Eastern writers and thinkers including Thomas Merton Jacques Derrida Nishida Kitaro Rainer Maria Rilke Franklin Merrell Wolff Franz Kafka Novalis Renzai Zen J D Salinger and the mysterious doughnut loving editor of the medieval Chinese koan collection Mumonkan

*Pair-Correlation Effects in Many-Body Systems* Kristian Blom, 2023-05-26 The laws of nature encompass the small the large the few and the many In this book we are concerned with classical i e not quantum many body systems which refers to any microscopic or macroscopic system that contains a large number of interacting entities The nearest neighbor Ising model originally developed in 1920 by Wilhelm Lenz forms a cornerstone in our theoretical understanding of collective effects in classical many body systems and is to date a paradigm in statistical physics Despite its elegant and simplistic description exact analytical results in dimensions equal and larger than two are difficult to obtain Therefore much work has been done to construct methods that allow for approximate yet accurate analytical solutions One of these methods is the Bethe Guggenheim approximation originally developed independently by Hans Bethe and Edward Guggenheim in 1935 This approximation goes beyond the well known mean field approximation and explicitly accounts for pair correlations between the spins in the Ising model In this book we embark on a journey to exploit the full capacity of the Bethe Guggenheim approximation in non uniform and non equilibrium settings Throughout we unveil the non trivial and a priori non intuitive effects of pair correlations in the classical nearest neighbor Ising model which are taken into account in the Bethe Guggenheim approximation and neglected in the mean field approximation

Embodied Communication in Humans and Machines Ipke Wachsmuth, Manuela Lenzen, Günther Knoblich, 2008-09-04 When people communicate face to face they don't just exchange verbal information Rather communication encompasses the whole body Communication partners synchronize their body sway and mimic or imitate each other's body postures and actions They produce a multitude of manual and facial gestures that help to illustrate what is being said show how communication partners feel or or reveal verbal deception Moreover face to face communication takes place in shared contexts where partners jointly attend and refer to the same objects often while working on joint tasks such as carrying a table or repairing a car together Traditionally communication research has neglected these parts of communication using the engineering model of signal transmission as the main theoretical metaphor This book takes a new look at recent empirical findings in the cognitive and neurosciences showing that

the traditional approach is insufficient and presenting a new interdisciplinary perspective the Embodied Communication perspective The core claim of the Embodied Communication perspective is that human communication involves parallel and highly interactive couplings between communication partners These couplings range from low level systems for performing and understanding instrumental actions like the mirror system to higher systems that interpret symbols in a cultural context The book can also serve as a guide for engineers who construct artificial agents and robots that should be able to interact with humans

*Computational Materials Science* Kaoru Ohno,Keivan Esfarjani,Yoshiyuki Kawazoe,2018-04-14 This textbook introduces modern techniques based on computer simulation to study materials science It starts from first principles calculations enabling to calculate the physical and chemical properties by solving a many body Schroedinger equation with Coulomb forces For the exchange correlation term the local density approximation is usually applied After the introduction of the first principles treatment tight binding and classical potential methods are briefly introduced to indicate how one can increase the number of atoms in the system In the second half of the book Monte Carlo simulation is discussed in detail Problems and solutions are provided to facilitate understanding Readers will gain sufficient knowledge to begin theoretical studies in modern materials research This second edition includes a lot of recent theoretical techniques in materials research With the computers power now available it is possible to use these numerical techniques to study various physical and chemical properties of complex materials from first principles The new edition also covers empirical methods such as tight binding and molecular dynamics

Patent Office,1907      **A match pair** Ames Savile,1889      **Pair Correlations in Many-Fermion Systems** Vladimir Z. Kresin,1998-02-28 At first glance the articles in this book may appear to have nothing in common They cover such seemingly disparate subjects as the properties of small metallic clusters and the behavior of superfluid He3 nuclear physics and organic materials copper oxides and magnetic resonance Why have they been brought together particularly in our time of narrow specialization In fact the properties and effects described in this book touch upon one and the same fundamental phenomenon pair correlation Introduced in the theory of superconductivity by J Bardeen L Cooper and J Schrieffer BCS this effect plays a key role in various Fermi systems The book consists of several sections The first chapter is concerned with conventional and high Tc superconductors The second chapter describes two relatively young families of superconductors organics and fullerenes Chapter III addresses the superfluidity of  $^3\text{He}$  The discovery of this phenomenon in 1971 was a big event in physics and last year was acknowledged by a Nobel prize This book contains the text of the Nobel lecture Chapters IV and V are devoted to correlations in finite Fermi systems such as small metallic clusters C60 anions and atomic nuclei The book thus covers a broad range of problems illuminating the close ties between various areas of physics      *120 Competitive Games and Exercises for Soccer* Nicola Pica,1999-09 These 120 drills and small games all contain a competitive element which will help motivate young players to stay involved and play to the best of their ability Coaches will find these exercises very useful to gear a practice session to the needs and skill level of their players Each drill includes a clear diagram an objective a detailed description with scoring rules and a discussion of the techniques involved An ideal handbook for any coach looking for new ways to keep his or her players interested and motivated while learning the skills and tactical elements of the game      **THE ART OF STRATEGY** Erik Schön,Sun Tzu,John Boyd,Simon Wardley,2020-04-18 What is strategy Why do you need it How do you do it And how can you be more certain to succeed THE ART OF STRATEGY provides timeless answers to these eternal questions It is a short introduction to strategy through the insights of three successful strategists Sun Tzu John Boyd and Simon Wardley It is a modern reading of Sun Tzu's The Art of War the strategy classic written in China around 500 BC using the lenses of Boyd OODA loop inventor and Wardley Wardley Map inventor who were both influenced by Sun Tzu Each chapter gently transforms The Art of War into a modern business setting and includes material from Boyd and Wardley in separate sections to complement and clarify Sun Tzu's terse poetic text The idea is to serve strategy in 13 short chapters requiring 5-10 minutes of reading time each An extensive glossary is included since many Chinese concepts are purposefully abstract and ambiguous You will discover new thinking patterns e.g OODA loops and situational awareness as well as visualization tools like Wardley Maps that will help you and your organization succeed together with your stakeholders You will also improve your understanding of the sometimes evil political gameplays and counter measures used by Nancy Pelosi Boris Johnson Donald Trump Vladimir Putin and Xi Jinping who are all inspired by Sun Tzu in some cases indirectly via Boyd A
