Head And Neck Cancer Treatment Rehabilitation And Outcomes:

Head and Neck Cancer Elizabeth C. Ward, Corina J. van As-Brooks, 2014-07-15 **The Handbook of Language and Speech Disorders** Nicole Müller, 2012-09-17 The Handbook of Speech and Language Disorders presents a comprehensive survey of the latest research in communication disorders. Contributions from leading experts explore current issues, landmark studies, and the main topics in the field, and include relevant information on analytical methods and assessment. A series of foundational chapters covers a variety of important general principles irrespective of specific disorders. These chapters focus on such topics as classification, diversity, considerations of intelligibility, the impact of genetic syndromes, and principles of assessment and intervention. Other chapters cover a wide range of language, speech, and cognitive intellectual disorders.

Clinical Care and Rehabilitation in Head and Neck Cancer Philip C. Doyle, 2019-03-21 Malignancies involving structures of the head and neck frequently impact the most fundamental aspects of human existence, namely those functions related to voice and speech production, eating, and swallowing. Abnormalities in voice production, and in some instances its complete loss, are common following treatment for laryngeal voice box cancer. Similarly, speech, eating, and swallowing may be dramatically disrupted in those where oral structures, e.g., the tongue, jaw, hard palate, pharynx, etc., are surgically ablated to eliminate the cancer. Consequently, the range and degree of deficits that may be experienced secondary to the treatment of head and neck cancer (HNCA) are often substantial. This need is further reinforced by the Centers for Disease Control and Prevention, who have estimated that the number of individuals who will be newly diagnosed with HNCA will now double every 10 years. This estimate becomes even more critical given that an increasing number of those who are newly diagnosed will be younger and will experience the possibility of long-term survival post-treatment. Contemporary rehabilitation efforts for those treated for HNCA increasingly demand that clinicians actively consider and address multiple issues. Beyond the obvious concerns specific to any type of cancer, i.e., the desire for curative treatment, clinical efforts that address physical, psychological, communicative, and social consequences secondary to HNCA treatment are essential components of all effective rehabilitation programs. Comprehensive HNCA rehabilitation ultimately seeks to restore multiple areas of functioning in the context of the disabling effects of treatment. In this regard, rehabilitation often focuses on restoration of function while reducing the impact of residual treatment-related deficits on the individual's overall functioning, well-being, quality of life (QOL), and ultimately, survivorship. Regardless of the treatment methods pursued for HNCA, e.g., surgery, radiotherapy, chemoradiation, or combined methods, additional problems beyond those associated with voice, speech, eating, and swallowing frequently exist. For example, post-treatment changes in areas such as breathing, maintaining nutrition, limitations in physical capacity, because surgical reconstruction, such as deficits in shoulder functioning, concerns specific to cosmetic alterations, and associated disfigurement and deficits in body image are common. Those treated for HNCA also may experience significant pain, depression, stigma, and subsequent social isolation. Concerns of this type have led clinicians and researchers to describe

HNCa as the most emotionally traumatic form of cancer It is therefore essential that clinicians charged with the care and rehabilitation of those treated for HNCa actively seek to identify acknowledge and systematically address a range of physical psychological social and communication problems Efforts that systematically consider this range of post treatment sequelae are seen as critical to any effort directed toward enhanced rehabilitation outcomes Actively and purposefully addressing post treatment challenges may increase the likelihood of both short and long term rehabilitation success in this challenging clinical population Current information suggests that successful clinical outcomes for those with HNCa are more likely to be realized when highly structured yet flexible interdisciplinary programs of care are pursued Yet contemporary educational resources that focus not only on management of voice speech eating and swallowing disorders but also address issues such as shoulder dysfunction due to neck dissection the significant potential for cosmetic alterations can offer a much broader perspective on rehabilitation Contemporary surgical treatment frequently involves reconstruction with extensive procedures that require donor sites that include both soft tissue from a variety of locations e g forearm thigh etc as well as bone e g the scapula Collectively resources that address these issues and many other concerns and the resultant social implications of HNCa and its treatment can serve to establish a comprehensive framework for clinical care Consequently providing a highly specialized and comprehensive educational resource specific to HNCa rehabilitation is currently needed The proposed edited book is designed to address this void in a single authoritative resource that is also accessible to the clinical readership Integral to this proposed book is information that guides clinical approaches to HNCa rehabilitation in addition to offering emphasis on the direct impact of changes in voice speech and swallowing and the impact of such losses on outcomes Finally while several other published sources currently exist see attached list the emphasis of these books is directed either toward the identification and diagnosis of malignant disease clinical and surgical pathology associated efforts directed toward biomedical aspects of cancer and its treatment or those with a focus on a single clinical problem or approach to rehabilitation Therefore the content of the proposed multi chapter text centers on delivering a systematically structured comprehensive and clinically oriented presentation on a range of topics that will provide readers at a variety of levels with a strong well integrated and empirically driven foundation to optimize the clinical care of those with HNCa The primary audience for this textbook is undergraduate and graduate level students in Speech Language Pathology as well as practitioners especially hospital based practitioners in Speech Language Pathology other key audiences include junior and senior level otolaryngology residents and fellows translational researchers in head and neck cancer related medical specialists e g radiation oncology oncology nurses and potentially other rehabilitation professionals such as occupational therapists counseling psychologists social workers and rehabilitation counselors

Complex Head and Neck Microvascular Surgery Anastasiya Quimby, Sat Parmar, Rui Fernandes, 2023-10-04 Head and neck patients who undergo treatment with free tissue transfer are patients with some of the most complex perioperative needs Due to nature of the defects reconstructive

surgery is complex and often is the only available option offering an acceptable quality of life Therefore successful recovery of these patients is of paramount importance Whilst the surgery itself is of utmost importance insufficient or inappropriate pre surgical work up and post operative care may lead to reconstructive failures Secondary reconstruction offers less optimal functional outcomes and may add to patient morbidity due to additional surgeries being required This book serves as a comprehensive source of information related to the pre intra and postoperative care of head and neck patients It fills a critical need for a single source that addresses all aspects of perioperative management of head and neck patients

Head and Neck Cancer Louis B. Harrison, Roy B. Sessions, Waun Ki Hong, 2009 This comprehensive multidisciplinary text addresses all aspects of head and neck cancer and represents a wide spectrum of specialists including surgical radiation and medical oncologists dentists pathologists radiologists and nurses The book focuses on a two part approach to treatment that maximizes the chance for a cure while maintaining a strong emphasis on quality of life This Third Edition's updated techniques section includes new radiation techniques such as IMRT and IGRT and new endoscopic and laser surgical techniques Other highlights include a new chapter on reconstructive techniques significant updates to all site specific chapters updates on chemoprevention and molecular targeting and discussions of new imaging modalities such as fused PET CT A companion Website will offer the fully searchable text with all images
