Opportunities and Challenges of Head and Neck Cancer Treatment in the Era of Immune Checkpoint Inhibitors Lei Cai, Xingchen Peng, Zheran Liu, 2025-08-27

In recent years the field of oncology has witnessed transformative advancements with the introduction of immunotherapy particularly in the treatment of head and neck cancers Immunotherapy by leveraging the body's immune system has opened new avenues in combating these malignancies which have traditionally been challenging to treat Immune checkpoint inhibitors a class of immunotherapeutic agents have shown significant promise in improving patient outcomes across various solid tumors including head and neck cancers These therapies have been associated with durable responses increased survival rates and in some instances complete tumor regression Despite these advancements the application of immunotherapy in solid tumors such as head and neck cancers is not without challenges The tumor microenvironment often presents an immunosuppressive barrier characterized by the expression of inhibitory molecules and the recruitment of regulatory immune cells which can hinder the efficacy of immune checkpoint inhibitors Addressing these challenges necessitates innovative approaches including combination therapies personalized medicine and targeted delivery systems to enhance immune response and optimize treatment outcomes Furthermore the identification of predictive biomarkers for patient selection remains a critical area of ongoing research
