Dietary Patterns in Cancer Prevention and Survival Raul Zamora-Ros, Esther Molina-Montes, 2024-09-13 Cancer is a leading cause of death worldwide accounting for nearly 10 million deaths in 2020 or nearly one in six deaths Although some individuals are at higher risk due to non modifiable risk factors between 30 40% of all cancer cases are estimated to be preventable through healthy lifestyles including healthy diets In 2018 a report from the World Cancer Research Fund and the American Institute for Cancer Research promoted ten cancer prevention recommendations on diet and nutrition But characterizing a healthy diet is not easy since foods and nutrients are not consumed alone Over the past decade dietary pattern analysis has emerged as an alternative and complementary approach to evaluating the relationship between diet and cancer risk Instead of looking at individual nutrients or foods dietary pattern analysis examines the effects of the overall diet Conceptually dietary patterns represent a broader picture of food and nutrient consumption and may thus be more predictive of disease risk than individual foods or nutrients Research on the effects of diet nutrition and physical activity on the risk of cancer in cancer survivors is growing but it is much more limited than that on risk Therefore the current lifestyle recommendations for cancer survivors should be similar to those for cancer prevention until we do not have specific recommendations

Palliative Care Consultations in Primary and Metastatic Brain Tumours Sara Booth, Eduardo Bruera, 2004 This is the third book in a new international multi contributed series aimed at providing practical clinical guidance on how to deal with difficult symptoms related to specific cancer sites There are few more distressing problems for patients and families than the development of a primary or secondary brain tumour Treatment is often palliative though intensive from the start Little firm evidence exists to guide the physician in caring for patients with seizures refractory to standard treatment Most of the work is based on case reports or personal experience This book draws the information together in an easily accessible form so that the book can be read and referred to on the ward or before a domiciliary visit Specialists in palliative care and oncology settings working in the acute sector and in hospices will find this book invaluable It will also appeal to consultants as well as specialist registrars clinical nurse specialists and nurse practitioners in palliative care oncology and neurology
